Evidence-Based Practice of Critical Care, edited by Drs. Clifford S. Deutschman and Patrick J. Neligan, provides objective data and expert guidance to help answer the most important questions challenging ICU physicians today. It discusses the clinical options, examines the relevant research, and presents expert recommendations on everything from acute organ failure to prevention issues. An outstanding source for "best practices" in critical care medicine, this book is a valuable framework for translating evidence into practice. Gain valuable evidence-based recommendations on key topics such as acute organ failure, infection, sepsis and inflammation, and prevention issues pointing the way to the most effective approaches. Get an overview of each question, an outline of management options, a review of the relevant evidence, areas of uncertainty, existing management guidelines, and authors' recommendations. Navigate a full range of challenges from routine care to complicated and special situations. Find the information you need quickly with tables that summarize the available literature and recommended clinical approaches.

lives of more than 300,000 Americans every year. Thus, it is important for heart failure specialists to be knowledgeable about strategies to prevent, manage risk for, and treat conditions leading to sudden cardiac death. These topics and more are covered in this issue.

This brief, practical text covers all aspects of tactical emergency medicine—the practice of emergency medicine in the field, rather than at the hospital, during disasters, police or military conflicts, mass events, and community incidents. Key topics covered include hostage survival, insertion and extraction techniques, continuum of force, medical support, planning and triage, medical evaluation in the incident zone, care in custody, medical control of incident site, decontamination, community communication, and more. Boxed definitions, case scenarios, and treatment algorithms are included. The concluding chapter presents "real world" scenarios to run tactical teams through and lists recommended training programs and continuing education.

Therapeutic hypothermia has emerged as a very important treatment option for patients with cardiac arrest as it provides significant protection from developing neurologic injury once the patient has been successfully resuscitated. Studies have demonstrated over 15% absolute risk reduction in death and neurologic injury using this therapy. Although hospitals and medical centers have become familiar with this important intervention it still remains greatly under utilized due to an experience and lack of resources to safely and effectively deploy such a program. The objective of this book is to educate and familiarize both providers and institutions as to how to develop and deploy and provide therapeutic hypothermia to their patients. The current knowledge for this is provided by speakers and national experts and also by literature review. There are several courses being provided on this as well throughout the US. These are good venues for people to come and see and get hands on experience, but there still needs to be a concrete book with references on how to go about getting this program started.
