John M. Doris has been a leading proponent of interdisciplinary approaches to moral psychology for decades. His work has transformed the way in which philosophers approach questions of character, virtue, and agency. This selection of his work focuses on the ways in which human personality orders (or fails to order) moral cognition and behaviour.

South African universities face major challenges in meeting the needs of their students in the area of academic language and literacy. The dominant medium of instruction in the universities is English and, to a much lesser extent, Afrikaans, but only a minority of the national population are native speakers of these languages. Nine other languages can be media of instruction in schools, which makes the transition to tertiary education difficult enough in itself for students from these schools. The focus of this book is on procedures for assessing the academic language and literacy levels and needs of students, not in order to exclude students from higher education but rather to identify those who would benefit from further development of their ability in order to undertake their degree studies successfully. The volume also aims to bring the innovative solutions designed by South African educators to a wider international audience.

This book critically examines the role of think tanks as foreign policy actors. It looks at the origins and development of foreign policy think tanks in India and their changing relevance and position as agents within the policy-making process. The book uses a comparative framework and explores the research discourse of prominent Indian think tanks, particularly on the India–Pakistan dispute, and offers unique insights and perspectives on their research design and methodology. It draws attention to the policy discourse of think tanks during the Composite Dialogue peace process between India and Pakistan and the subsequent support from the government which further expanded their role. One of the first books to offer empirical analyses into the role of these organisations in India, this book highlights the relevance of and the crucial role that these institutions have played as non-state policy actors. Insightful and topical, this book will be of interest to researchers focused on international relations, foreign policy analysis and South Asian politics. It would also be a good resource for students interested in a theoretical understanding of foreign policy institutions in general and Indian foreign policy in particular.

Campaign financing is one of today's most divisive political issues. The left asserts that the electoral process is rife with corruption. The right protests that the real aim of campaign limits is to suppress political activity and protect incumbents. Meanwhile, money flows freely on both sides. In *Plutocrats United*, Richard Hasen argues that both left and right avoid the key issue of the new Citizens United era: balancing political inequality with free speech. The Supreme Court has long held that corruption and its appearance are the only reasons to constitutionally restrict campaign funds. Progressives often agree but have a much broader view of corruption. Hasen argues for a new focus and way forward: if the government is to ensure robust political debate, the Supreme Court should allow limits on money in politics to prevent those with great economic power from distorting the political process.

Political and scientific debates on migration policies have mostly focused on governments' efforts to control or reduce low-skilled, asylum, and irregular migration or to encourage the return migration of these categories. Less research and constructive discourse has been conducted on the role and effectiveness of policies to attract or retain high-skilled workers. An improved understanding of the drivers and dynamics of high-skilled migration is essential for effective policy-making, as most highly developed and emerging economies experience growing shortages of high-skilled labour supply in certain occupations and sectors, and skilled immigration is often viewed as one way of addressing these. Simplistic assumptions that high-skilled migrants are primarily in pursuit of higher wages raise the expectation that policies which open channels for high-skilled immigration are generally successful. Although many countries have introduced policies aimed at attracting and facilitating the recruitment of high-skilled workers, not all recruitment efforts have had the desired effects, and anecdotal evidence on the effectiveness of these programmes is rather mixed. The reason is that the rather narrow focus on migration policy coincides with a lack of systematic and rigorous consideration of other economic, social, and political drivers of migration, which may be equally - or sometimes even more - important than migration policies per se. A better understanding of migration policies, their making, consequences and limitations, requires a systematic knowledge of the broader economic, social and political structures and their interaction in both origin and destination countries. This book enhances this vibrant field of social scientific enquiry by providing a systematic, multidisciplinary, and global analysis of policies driving international high-skilled migration processes in their interaction with other migration drivers at the individual, city, national, and international level.

This latest volume in the World Yearbook of Education series examines the relationship between assessment systems and efforts to advance equity in education at a time of growing inequalities. It focuses on the political motives behind the expansion of an assessment industry, the associated expansion of an SEN industry and a growth in consequential accountability systems. Split into three key sections, the first part is concerned with the assessment industry, and considers the purpose and function of assessment in policy and politics and the political context in which particular assessment practices have emerged. Part II of the book, on assessing deviance, explores those assessment and identification practices that seek to classify different categories of learners, including children with Limited English Proficiency, with special needs and disabilities and with behavioural problems. The final part of the book considers the consequences of assessment and the possibility of fairer and more equitable alternatives, examining the production of inequalities within assessment in relation to race, class, gender and disability. Discussing in detail the complex historical intersections of assessment and educational equity with particular attention to the implications for marginalised populations of students and their families, this volume seeks to provide reframings and reconceptualisations of assessment and identification by offering new insights into economic and cultural trends influencing them. Co-edited by two internationally renowned scholars, Julie Allan and Alfredo J. Artiles, World Yearbook of Education 2017 will be a valuable resource for researchers, graduates and policy makers who are interested in the economic trends of global education assessment.

Why is 'Why' Unique? Its Syntactic and Semantic Properties considers the behaviour of this peculiar wh-element across many different languages, including Ewe, Trevisan, Italian, Basque, German, Dutch, Cantonese, Mandarin, English and Hebrew. In ten original chapters, the authors explore various aspects of why-questions, such as the way why interacts with V2 constructions in Basque, with a subject clitic in Trevisan or how its morpho-syntactic make-up determines its merge position in Ewe, to mention but a few. Furthermore, a clear-cut distinction is established between high and low reason adverbials which are subsequently examined in why-stripping environments in Dutch. Beyond why proper, the book explores a special class of wh-expressions in some in-situ languages which give rise to unexpected why-construals with a touch of whining force. The objective is to explain the unusual syntactic position of these wh-expressions as well as their association with peculiar pragmatics. The questions are addressed for Cantonese: are what-initial sentences genuine questions? To what extent are Cantonese what-initial sentences similar to how-initial sentences in Mandarin? Beside these what-as-why questions, a special class of rhetorical questions, the doubly-marked interrogatives in Hebrew, come under scrutiny. Why is 'why' unique also concerns the interface with prosody and several experimental studies investigate precisely this aspect.

Over the last few decades, many countries have reformed their secured transactions law. One of the main reasons has been the clear link between reform and the availability of credit, and the drive to improve access to finance, particularly for micro, small and medium-sized enterprises. This book focuses particularly on developing economies in Africa, which

have legal frameworks influenced by English, French, Belgian, Roman-Dutch and other laws. Reform in this area of law across African countries has taken a number of forms, which are explored and discussed in this book. Secured Transactions Law Reform in Africa is a mixture of a critical description of the pre-reform law and practice, and the reform process itself. It also includes a comparative analysis of the legal provisions and an examination of the early results of the reforms. The book sets out a road map for the future of secured transactions reform; primarily in Africa, but also in other countries that have undertaken or are contemplating similar reforms. This book is the second in a series of books about Secured Transactions Law in countries around the world, and its reform, both on a national and an international scale. The first book, Secured Transactions Law Reform: Principles, Policies and Practice, was published in 2016.

The 8th International Conference on Physical Modelling in Geotechnics (ICPMG2014) was organised by the Centre for Offshore Foundation Systems at the University of Western Australia under the auspices of the Technical Committee 104 for Physical Modelling in Geotechnics of the International Society of Soil Mechanics and Geotechnical Engineering. This quadrennial conference is the traditional focal point for the physical modelling community of academics, scientists and engineers to present and exchange the latest developments on a wide range of physical modelling aspects associated with geotechnical engineering. These proceedings, together with the seven previous proceedings dating from 1988, present an inestimable collection of the technical and scientific developments and breakthroughs established over the last 25 years. These proceedings include 10 keynote lectures from scientific leaders within the physical modelling community and 160 peer-reviewed papers from 26 countries. They are organised in 14 themes, presenting the latest developments in physical modelling technology, modelling techniques and sensors, through a wide range of soil-structure interaction problems, including shallow and deep foundations, offshore geotechnics, dams and embankments, excavations and retaining structures and slope stability. Fundamental aspects of earthquake engineering, geohazards, ground reinforcements and improvements, and soil properties and behaviour are also covered, demonstrating the increasing complexity of modelling arising from state-of-the-art technological developments and increased understanding of similitude principles. A special theme on education presents the latest developments in the use of physical modelling techniques for instructing undergraduate and postgraduate students in geotechnical engineering.

India is growing into one of Asia's most important military powers. Its defence budget has more than doubled in the past decade, and it imports more arms than anyone else in the world. But India is still seen as a land power focused on long, disputed and militarised borders with Pakistan and China rather than the global military force it was in the first half of the twentieth century under British rule. Is this changing? India is acquiring increasing numbers of key platforms – aircraft carriers, amphibious ships, refuelling tankers and transport aircraft – that are extending its reach to the Indian Ocean littoral and beyond. But most accounts of this build-up have been impressionistic and partial. Indian Power Projection assesses the strength, reach and purposes of India's maturing capabilities. It offers a systematic assessment of India's ability to conduct long-range airstrikes from land and sea, transport and convey airborne and amphibious forces, and develop the institutional and material enablers that turn platforms into capabilities. It draws extensively on the lessons of modern expeditionary operations, and considers how India's growing interests might shape where and how it uses these evolving capabilities in the future. This study finds that Indian power projection is in a nascent stage: limited in number, primarily of use against much-weaker adversaries, and deficient in some key supporting capabilities. India's defence posture will continue to be shaped by local threats, rather than distant interests. Indian leaders remain uncomfortable with talk of military intervention and expeditionary warfare, associating these with colonial and superpower excess. But as the country's power, interests and capabilities all grow, it is likely that India will once more find itself using military force beyond its land borders.
