The current volume aspires to add to previous research on the connection between writing and language learning from a dual perspective: It seeks to reflect current progress in the domain as well as to foster future developments in theory and research. The theoretical postulations contained in Part I identify and expand in novel ways the diverse lenses through which the varied, multi-faceted dimensions of the connection between writing and language learning can be explored. The methodological reflections put forward in Part III signal theoretically-grounded and pedagogically-relevant paths along which future empirical work can grow. The empirical studies reported in Part II illuminate the myriad of individual, educational, and task-related variables that (may) mediate short-term and long-term language learning outcomes. These studies examine diverse forms of writing, performed in varied environments (including pen-and-paper and digital writing), conditions (writing individually and/or collaboratively), and instructional settings (academic settings – including secondary school and college level institutions – as well as out-of-school contexts).

Haar naam was Henrietta Lacks, maar de medische wereld kent haar als HeLa. In de jaren '50 werden haar kankercellen zonder dat zij dat wist bij haar weggenomen. Met behulp van deze cellen, die letterlijk onsterfelijk zijn, werden de meest uiteenlopende geneeskundige ontdekkingen gedaan en rond de verkoop ervan ontstond een miljoenenindustrie. Het leven van Henrietta bleef echter vrijwel onbekend en ook haar familie wist tot ruim dertig jaar geleden niet van het bestaan van de cellen af. Rebecca Skloot vertelt het verhaal van de 'HeLa-cellen', maar laat ons vooral ook kennis maken met Henrietta, haar verleden en haar familie, die nog steeds worstelt met de nalatenschap van de cellen. Ze laat zien dat het verhaal van de familie Lacks onlosmakelijk verbonden is met de duistere geschiedenis van het experimenteren met Afrikaans-Amerikanen, het ontstaan van de ethiek binnen de biologie en de juridische strijd over de vraag of we de baas zijn over de materie waarvan we zijn gemaakt.

In het Mississippi van de jaren zestig wordt aan zwarte vrouwen wel de opvoeding van blanke kinderen toevertrouwd, maar niet het poetsen van het tafelzilver. Drie vrouwen zijn het allesbepalende racisme meer dan zat en besluiten dat de verschillen tussen hen minder belangrijk zijn dan de overeenkomsten. "HELP! My Students Can't Write!" Why You Need a Writing Revolution in Your Classroom and How to Lead It. The Writing Revolution (TWR) provides a clear method of instruction that you can use no matter what subject or grade level you teach. The model, also known as The Hochman Method, has demonstrated, over and over, that it can turn weak writers into strong communicators by focusing on specific techniques that match their needs and by providing them with targeted feedback. Insurmountable as the challenges faced by many students may seem, TWR can make a dramatic difference. And the method does more than improve writing skills. It also helps: Boost reading comprehension Improve organizational and study skills Enhance speaking abilities Develop analytical capabilities TWR is as much a method of teaching content as it is a method of teaching writing. There's no separate writing block and no separate writing curriculum. Instead, teachers of all subjects adapt the TWR strategies and activities to their current curriculum and weave them into their content instruction. But perhaps what's most revolutionary about the TWR method is that it takes the mystery out of learning to write well. It breaks the writing process down into manageable chunks and then has students practice the chunks they need, repeatedly, while also learning content.

The Bulletin of the Atomic Scientists is the premier public resource on scientific and technological developments that impact global

security. Founded by Manhattan Project Scientists, the Bulletin's iconic "Doomsday Clock" stimulates solutions for a safer world. The ability to effectively communicate in a globalized world shapes the economic, social, and democratic implications for the future of P-12 students. Digitally mediated communication in an inclusive classroom increases a student's familiarity and comfortability with multiple types of media used in a wider technological culture. However, there is a need for research that explores the larger context and methodologies of participatory literacy in a digital educational space. *Participatory Literacy Practices for P-12 Classrooms in the Digital Age* is an essential collection of innovative research on the methods and applications of integrating digital content into a learning environment to support inclusive classroom designs. While highlighting topics such as game-based learning, coding education, and multimodal narratives, this book is ideally designed for practicing instructors, pre-service teachers, professional development coordinators, instructional facilitators, curriculum designers, academicians, and researchers seeking interdisciplinary coverage on how participatory literacies enhance a student's ability to both contribute to the class and engage in opportunities beyond the classroom.
