Successful Enquiry Answering Every Time is designed to guide information professionals through all the stages of research, from finding out what the enquirer really wants, to providing a polished, value-added answer. When people want to satisfy their immediate curiosity they're much more likely to use a search engine on their mobile device than ask their local library. But while the days of personal intervention in this kind of enquiry are inevitably numbered, the professional skills that underpin them are not. This book uses technology as the enabler of the thought processes that information professionals need to engage in when answering enquiries, and makes the case that new technology, far from making them irrelevant, raises the skill stakes for all. Now in its 7th edition, this book is fully updated to cover new skills, such as: employing critical thinking to manipulate, categorise and prioritise raw search results using strategic reading and abstracting techniques to identify and summarise the essential information the enquirer needs from the retrieved documents drawing on established story-telling practice to present research results effectively – whether orally or in writing working to the POWER model: plan, organise, write, edit, review. This book is ideal for anyone who has to answer enquiries from users in any information role; those working in contact centres who are dealing with information enquiries, processing transactions or trouble-shooting technical issues; and information professionals working on enquiry desks in large or small academic, public, school or special libraries. Pressures for transformational change have become a regular feature of most fields of human endeavour. Master-thinkers and visionaries alike have reframed existing divisions as connecting relationships, bringing together as dynamic systems the supposed opposites of parts and wholes, stability and change, individuals and society, and rational and creative thinking. This reframing of opposites as interconnected wholes has led to realisation of the power of a collective mind. This book offers ways and means of creating the synergies that are crucial in influencing a desired transformational change towards a just and sustainable future. It describes how and why our current decision-making on any complex issue is marked by clashes between the different

interests involved. More optimistically, the book pursues a mode of thinking that brings together government, specialised and community interests at the local, regional and personal scales in a collective transformation process. Practical examples signal the emergence of a new knowledge tradition that promises to be as powerful as the scientific enlightenment. Written in accessible language, this book will be insightful reading for anyone struggling with transformational change, especially researchers, students and professionals in the fields of administration, governance, environmental management, international development, politics, public health, public law, sociology, and community development
