This book provides a comprehensive introduction to psychological assessment and covers areas not typically addressed in existing test and measurements texts, such as neuropsychological assessment and the use of tests in forensics settings. The book introduces the vocabulary of the profession and the most basic mathematics of testing early as being fundamental to understanding the field. Numerous examples are drawn from tests that the authors have written or otherwise helped to develop, reflecting the authors' deep understanding of these tests and their familiarity with problems encountered in test development, use, and interpretation. Following the introduction of the basic areas of psychometrics, the book moves to areas of testing that represent

various approaches to measuring different psychological constructs (memory, language, executive function, etc.), with emphasis on the complex issue of cultural bias in testing. Examples of existing tests are given throughout the book; however, this book is not designed to prepare students to go out and administer, score, and interpret specific psychological tests. Rather, the purpose of this book is to provide the foundational core of knowledge about tests, measurement, and assessment constructs, issues, and quantitative tools. Explains what constitutes a psychological test, how tests are developed, how they are best used, and how to evaluate their strengths and weaknesses; Describes areas of testing that represent different approaches to measuring different psychological constructs; Explains applications of psychological testing to issues in the courts; Addresses how test authors and publishers design and research tests to address the difficult and demanding issues of cultural differences in test performance and interpretation of test results.

Jordan Wright's Conducting Psychological Assessment is a comprehensive step-by-step guide to every aspect of psychological testing and assessment. Blending clinical wisdom with rigorous empirical evidence, the author guides readers through every phase of the assessment process, from selecting appropriate measures and collecting test data through writing assessment reports and providing feedback to clients. Experienced clinicians, early career psychologists, and students will all benefit from this important book; it should be on every clinician's bookshelf." —Robert F. Bornstein, PhD, Derner School of Psychology, Adelphi University "Conducting Psychological Assessment (2nd ed) provides a clear, concise, practical

identify the numerous conditions that can coexist and even worsen true ADHD or cause ADHD-like presentations when it does not exist. To help clinicians, this book offers three components. Part 1 presents the ADHDology Evaluation Model, which provides the ten steps to comprehensively evaluate ADHD. Part 2 presents numerous medical, sleep, psychological, trauma, neurodevelopmental, sensory processing, and fetal substance exposure conditions. These chapters describe the conditions in detail, how they coexist with or appear similar to ADHD, how to distinguish them from true ADHD, and how mental health clinicians and specialists can further evaluate and treat these disorders. Part 3 is composed of the Comprehensive Diagnostic ADHD Screening System (CDASS), a unique approach to improve the accuracy of evaluating ADHD by utilizing checklists to help identify: the risk factors associated with ADHD, the many possible conditions presented in Part 2 that may exist so these can be further considered and evaluated by specialists, and little-known and not typically considered conditions that can cause ADHD-like presentations. While written mainly for clinicians; parents, educators, and interested others will find the text helpful to better understand these complex topics, as well as assist clinicians with the ADHD diagnostic process.

deficit/hyperactivity disorder, and learning disorder are but a subset of problems that youth experience throughout their lives. Chapter 1 presents the school-based practitioner as a first-line interventionist for these difficulties. Framing school-based care within a multi-tiered system of support, Chapter 1 introduces cognitive-behavioral therapy (CBT), an evidence-based intervention with flexible applications for children and adolescents. It acknowledges the complex intersection between CBT, 504 Plans, and individualized education programs (IEPs); discusses the many ways students may receive services under the law (and otherwise); and highlights the details of school-based practice integral to evaluating these plans. Chapter 1 ends with a thorough case presentation complete with background information, interviews, behavior and symptom assessment, CBT session planning, and outcome data"--

This book is a practical guide to the intellectual assessment of children and adolescents in the schools. Although primarily intended for graduate students in school psychology training programs and practicing school psychologists, it should also be useful for those involved with making decisions in schools that are based, in part, on the results of intelligence tests, including counselors, teachers, administrators, and other school personnel. In writing it, we placed particular emphasis on evidence-based practices pertaining to the use and interpretation of intelligence tests. The assessment of intelligence has long been mandated by law for eligibility determination for special education and related services. At the current time, however, there is widespread disagreement about the use and interpretation of intelligence tests. Nevertheless, none of the currently available books on intellectual assessment critically reviews the scientific evidence regarding the critical role played by intelligence tests in the schools for the determination of eligibility for special education and related services. One of the main intentions of this book was to fill that gap and to recommend best practices

with scientific support.

This leading practitioner reference and text--now in a revised and expanded fourth edition--provides the knowledge needed to use state-of-the-art cognitive tests with individuals of all ages, from preschoolers to adults. The volume examines major theories and tests of intelligence (in chapters written by the theorists and test developers themselves) and presents research-based approaches to test interpretation. Contributors address critical issues in evaluating culturally and linguistically diverse students, gifted students, and those with intellectual disability, sensory-motor impairments, traumatic brain injuries, and learning difficulties and disabilities. Most courses in counseling, social work, therapy, and clinical psychology programs lump clinical work with "children and adolescents" together into a single unit while the social, emotional, physical, and neurobiological development of youth is often only a portion of a development course that covers the entire human lifespan. The consequence is twofold: department chairs, accrediting agencies, administrators, and faculty are tasked with covering too much content in too few course hours; and graduate students and beginning practitioners are woefully unprepared for working with difficult populations, including teenagers and young adults. *Evidence-Based Psychotherapy with Adolescents* helps new clinicians working in any treatment setting learn how to conduct psychotherapy with adolescents from a place of understanding and empathy. In addition to addressing adolescent development, psychological theories in practice, neurobiology of adolescents, clinical assessment, and evidence-based treatment approaches for a range of common mental health concerns, the text explains

A complete guide that empowers readers with the insight and tools necessary to support adolescents as they progress towards adulthood, this book effectively builds the core skill sets of students and new clinicians in social work, psychology, psychiatry, and marriage and family therapy.

This unique volume explores issues related to working with children who have nonverbal learning disability (NVLD). It examines how a child's psychology - thoughts, feelings, beliefs - affects his or her functioning and learning. In addition, the book addresses how a child's experiences are processed through individual personality, psychology, culture, environment and economic circumstances, and family dynamics. Using these psychological organizing principles, the book describes how to work most effectively with young patients with NVLD. It offers a new model and definition for understanding NVLD, emphasizing its core deficit of visual-spatial processing. In addition, this book addresses efforts to rename NVLD to developmental visual-spatial disorder (DVSD). It describes the 11 possible subtypes as including a primary deficit in
