A comprehensive encyclopedia on all aspects of the production, consumption, and social impact of alcohol. * 500 A-Z entries on the production and use of the principal alcoholic beverages, cultural representations, temperance movements, research, treatment, and forms of regulation and prohibition in the United States and around the world * Written by 170+ international scholars from the disciplines of history, anthropology, medicine, political science, cultural studies, and the law * A chronology of major events in the history of alcohol and its social response since the 18th century * Numerous drawings and illustrations such as historical photographs, vintage lithographs, posters, and product labels representing early advertising Prohibition came early to Kansas in 1881, driving more than 125 breweries out of business or underground. Refusing to even vote on the 1933 national repeal, the state remained dry until 1948, with liquor by the drink finally being approved in 1987. Lawrence's Chuck Magerl worked with the legislature to pen new laws allowing something (little known at the time) called a "microbrewery." Chuck started the state's first brewery in over a century, appropriately named Free State Brewing Company. John Dean of Topeka's Blind Tiger Brewery counts more awards than any other brewer in the state, including Champion Brewer at the World Beer Cup in 2014. Props & Hops Brewing, in tiny Sylvan Grove, is owned and operated by an enterprising pilot who also owns and operates a crop-dusting business on the weekdays. Author Bob Crutchfield explores the state's breweries and recounts the Sunflower State's hoppy history. Obesity is officially recognised as a major worldwide public health problem. "Progress in Obesity Research: 9" fulfils the need for an accessible and fundamental research, highly recommended towards a better understanding of obesity. It will prove an indispensable resource for all those involved in the research, prevention and treatment of obesity.

The second European edition of Financial Markets and Corporate Strategy provides comprehensive coverage of financial markets and corporate finance, brought to life by real world examples, cases and insights. Placed in a truly international context, this new and updated edition takes an academic and practical view-point to guide students through the challenges of studying and practicing finance. Aimed specifically at an international audience, this edition boasts hundreds of references to new and relevant non-US research papers from top finance journals. Whilst retaining the well respected structure of the successful US text, Professor David Hillier has also made a number of additions which include: Fully updated research, data and examples in every chapter. Coverage of the global financial crisis, the impact it made on the financial markets and the lessons being learnt by the finance industry. A stronger emphasis on corporate governance and agency theory. Updates on accounting standards, bankruptcy laws, tax rules and tax systems.

The prevailing approach to preventing or reducing alcohol problems is generally ineffective, often counter-productive.

Winner of the 2015 Ruth Benedict Prize for Outstanding Edited Volume Sex, sexuality and sexual relationships are hotly debated in Indonesia, triggering complex and often passionate responses. This innovative volume explores these issues in a variety of ways. It highlights historical and newer forms of sexual diversity, as well as the social responses they provoke. It critiques differing representations of sexuality, pointing to the multiplicity of discourses within which sexuality and 'the sexual' are understood in modern-day Indonesia. Placing sexuality centre-stage and locating it within the specific historical context of the Reformasi era, this landmark volume explores understandings and practices across a wide variety of sites, focusing in on a diverse group of Indonesian actors, and the contested meanings that sexuality carries. Beginning with a substantive introduction and concluding with a scholarly reflection on key issues, the volume is framed around the four themes of sexual politics, health, diversity and representations. It seeks both to present new empirical findings as well as to add to existing theoretical analysis. This work fills an important gap in our understanding of the evolution and contemporary dynamics of Indonesian sexualities. It will be of interest to scholars and academics from disciplines including gender and sexuality studies, global health, sexual and reproductive health, anthropology, sociology and Asian studies.

This book offers a comprehensive understanding of the current scientific knowledge concerning risks associated with food preparation, processing and consumption, with particular attention to the gap between scientific research and public perception. Examining the effects of food on the body from both micro and macro levels, it covers a range of broad themes and current concerns, including obesity and the 'obesity epidemic', the benefits or otherwise of dietary supplements, caffeine consumption, GM food, alcohol, organic food, the consumption of fruit and vegetables, and pathogens and contaminants. Thematically arranged according to the application of broad theoretical approaches in sociological theory – the socio-cultural perspective, the risk society perspective and the governmentality perspective – each chapter focuses on a particular area of interest or concern in relation to food, covering the existing literature in detail and offering illustrative empirical examples, whilst identifying gaps in knowledge and areas for further research. An accessible and rigorous examination of food and health, and the discrepancy between scientific opinion and consumer perception of safe food – the real risks versus the perceived risks – this book will appeal to scholars and students of sociology, geography, food, nutrition and environmental ecosystems, as well as health professionals.

Beer has been consumed across the globe for centuries and was the drink of choice in many ancient societies. Today it is the most important alcoholic drink worldwide, in terms of volume and value. The largest brewing companies have developed into global multinationals, and the beer market has enjoyed strong growth in emerging economies, but there has been a substantial decline of beer consumption in traditional markets and a shift to new products. There is close interaction between governments and markets in the beer industry. For centuries, taxes on beer or its raw materials have been a major source of tax revenue and governments have regulated the beer industry for reasons related to quality, health, and competition. This book is the first economic analysis of the beer market and brewing industry. The introduction provides an economic history of beer, from monasteries in the early Middle Ages to the recent 'microbrewery movement', whilst other chapters consider whether people drink more beer during recessions, the effect of television on local breweries, and what makes a country a 'beer drinking' nation. It comprises a comprehensive and unique set of economic research and analysis on the economics of beer and brewing and covers economic history and development, supply and demand, trade and investment, geography and scale economies, technology and innovation, health and nutrition, quantity and

quality, industrial organization and competition, taxation and regulation, and regional beer market developments.

Case Studies in the Beer Sector investigates managerial and marketing dynamics in the beer sector. It explores the relevance of consumer science and its use as a tool for marketing strategies, putting special focus on small craft breweries. The book provides a variety of case studies from several countries to outline the global context within which the beer industry is developing. Real-life examples on how innovation and differentiation strategies affect consumer perceptions of beer are included, along with the relationship among breweries throughout the supply chain. Sections cover business strategy, sustainability, and how breweries are meeting the increasing demand for sustainable production processes. While this book provides a thorough reference for scholars and practitioners who work in the beer sector, it is also ideal for those studying business, agriculture, food engineering, technology, applied marketing and business strategy. Investigates contemporary managerial and marketing dynamics in the beer sector Explores the relevance of consumer science and its use as a tool for marketing strategies for both multinational players and small craft breweries Includes case studies that provide the reader with real-life examples on how to apply concepts discussed Offers a global, cross-cultural perspective on the beer sector in different countries and continents

This volume is a compendium of the lectures, presentations, and workshops of the International Congress entitled "Facing the Pancreatic Dilemma" and of the 17th Meeting of the Italian Association for the Study of the Pancreas, held in Verona on 16 -19 June 1993. Pancreatology is still a relatively young science. Many pathophysiological aspects of pancreatic disease are as yet obscure, and a fair number of the etio pathogenetic mechanisms adduced are no more than hypothetical. We have therefore chosen to compare and contrast in a single volume the various hypo theses and interpretations put forward by leading experts in the field. In view of the swift evolution of this branch of medical science, it is sound policy to bear in mind that yesterday's heresies have become today's orthodoxy, and that today's heresies may well turn out to be accepted orthodoxy in a not too distant future. The various "pancreatic dilemmas" are addressed systematically in these pages, and we believe that the book will prove an invaluable tool for the specialist and for any physician dealing with pancreatic disease. The book also represents a tribute by the Verona School of Pancreatology to the memory of Prof. L. A. Scuro, founder of the School and one of the outstanding Italian pioneers of pancreatology.

Discover the science of beer and beer making Ever wondered just how grain and water are transformed into an effervescent, alcoholic beverage? From prehistory to our own time, beer has evoked awe and fascination; it seems to have a life of its own. Whether you're a home brewer, a professional brewer, or just someone who enjoys a beer, The Chemistry of Beer will take you on a fascinating journey, explaining the underlying science and chemistry at every stage of the beer making process. All the science is explained in clear, non-technical language, so you don't need to be a PhD scientist to read this book and develop a greater appreciation for the world's most popular alcoholic drink. The Chemistry of Beer begins with an introduction to the history of beer and beer making. Author Roger Barth, an accomplished home brewer and chemistry professor, then discusses beer ingredients and the brewing process. Next, he explores some core concepts underlying beer making. You'll learn chemistry basics such as atoms, chemical bonding, and chemical reactions. Then you'll explore organic chemistry as well as the chemistry of water and carbohydrates. Armed with a background in chemistry principles, you'll learn about the chemistry of brewing, flavor, and individual beer styles. The book offers several features to help you grasp all the key concepts, including: Hundreds of original photographs and line drawings Chemical structures of key beer compounds Glossary with nearly 1,000 entries Reference tables Questions at the end of each chapter The final chapter discusses brewing at home, including safety issues and some basic recipes you can use to brew your own beer. There's more to The Chemistry of Beer than beer. It's also a fun way to learn about the science behind our technology and environment. This book brings life to chemistry and chemistry to life.

Alcohol has always been an issue in public health but it is currently assuming increasing importance as a cause of disease and premature death worldwide. Alcohol: Science, Policy, and Public Health provides an interdisciplinary source of information that links together, the usually separate fields of, science, policy, and public health. This comprehensive volume highlights the importance of bringing scientific knowledge to bear in order to strengthen and develop alcohol public policy. The book looks at the historical evolution of alcohol consumption in society, key early studies of alcohol and disease, and the cultural and social aspects of alcohol consumption. It then goes on to cover the chemistry and biology of alcohol, patterns of consumption, gender and age-related issues, alcohol and injury, alcohol and cancer and non-malignant disease, and various current therapeutic aspects. The book concludes with a section on alcohol policy, looking at issues of poverty, the availability of alcohol and alcohol control measures. This major reference, written by international leaders in the fields of alcoholism and alcohol policy, provides a comprehensive study of one of the foremost health problems in the world, and represents the highest standards of research within the field. It will be valuable to physicians and health professionals involved with patients with alcohol-related problems, scientists, public health specialists, health policy specialists, researchers and legislators as well as students of public health.

Discover the decisive role beer has had in the course of history, how it is central to many European cultures and customs, inspired art and, even, brought armies together in a ceasefire in the midst of world war. The history of beer stretches back as far as humans have engaged in agriculture, it has been a basic food as long as bread. Includes potted histories of some of the world's most famous beers, from Guinness to Carlsberg, Whitbread Bitter, Spitfire Kentish Ale, to Peroni Nastro Azzurro and, even, Ur-Bock Dunkel (once Martin Luther's favourite beer). A celebration

of the quirky, and influential, *Down Beer Street* will appeal to anyone who has watched 'QI'; in a series of short, entertaining chapters the authors provide a pint-sized history of the world. What forges the unique human personality? In *Island in the City* Micah McCrary, taking his genetic inheritance as immutable, considers the role geography has played in shaping who he is. Place often leaves indelible marks: the badges of self-discovery; the scars from adversity and hardship; the gilded stamps from personal triumphs; the tattoos of memory; and the new appendages--friendships, experiences, and baggage--we carry with us. Each place, with its own personality, has the power to form or revise our personhood in surprising and fascinating ways. McCrary considers three places he has called home (Normal, Illinois; Chicago; and Prague) and reflects on how these surroundings have shaped him. His sharp-eyed, charming memoir-in-essays contemplates how aspects of his identity, such as being black, male, middle-class, queer, and American, have developed and been influenced by where he hangs his hat.

In *Alcohol, Cocaine, and Accidents* leading experts provide concise yet focused scientific reviews of the role of alcohol and cocaine in automotive, aviation, and aquatic accidents. The authoritative contributors present both applied research and epidemiological studies, with emphasis on the prevention of injuries through an increased use of appropriate educational labels, law enforcement, and personal and community-based prevention programs. In addition to detailed topical coverage, the articles suggest prevention strategies and provide supporting data for the role of treatment in reducing accidents. *Alcohol, Cocaine, and Accidents* will be of interest to substance abuse researchers, law enforcement officials, treatment providers, policy makers, and legislators responsible for regulating alcohol and drug use, as well as safety issues in all areas of transportation.

Economic Foundations of Law (2nd ed.) provides an economic analysis of the major areas of the law: property law, torts, contracts, criminal law, civil procedure, corporation law and financial markets, taxation and labor law. In line with current trends in legal scholarship, discussion is focused on economic principles such as risk aversion, efficiency, opportunity cost, moral hazard, rent-seeking behaviour and economies of scale. Accessible, comprehensive and well written, this book uses extensive practical examples and explanations to illustrate key points. There are numerous applications to lawyers and the legal profession, with detailed discussions of subjects as diverse as the proposed market for transplantable human organs, the market for adoptions, the market for bail bonds, the unanticipated effects of Megan's law, and issues of racial profiling. Fully updated and revised, a new chapter on labor law has also been included.

La capacità di predire il comportamento dei consumatori è determinante in qualsiasi business. Nell'ambito dell'intelligenza artificiale (AI) esiste un'ampia gamma di modelli predittivi che sono applicabili al marketing e ognuno presenta particolari vantaggi e svantaggi. L'obiettivo di questo testo è fornire una visione completa di questi approcci evidenziandone i punti di forza e di debolezza per imparare le migliori applicazioni di ognuno e costruire un ponte tra chi deve scegliere quale modello applicare e il mondo dei professionisti che danno forma alle analisi. Un libro dedicato a chi si occupa di segmentazione e analisi di mercato per la definizione di strategie di marketing, e più in generale a tutti i marketer che devono ottimizzare campagne sulla base di risultati analitici.

The role of nutrition in neoplasia has been of longstanding concern. The subject was addressed by investigators in the first decade of this century, but was dropped. Vigorous attention was paid to this area of oncology in the 1940s, primarily due to the efforts of Dr. A. Tannenbaum at the Michael Reese Hospital in Chicago and the group at the University of Wisconsin in Madison. However, interest waned again until the 1970s when the question of diet and cancer was addressed and it has since been at the forefront of cancer research. The present volume (7) of *Human Nutrition: A Comprehensive Treatise* summarizes current knowledge in the area of nutrition and cancer. The first chapter is an overview written by John Higginson, whose contribution to understanding of cancer and nutrition spans several decades. The next essays cover epidemiology and physiology. The ensuing chapters address, in turn, those dietary factors relating to nutrition and cancer, namely, carbohydrates, protein, fat, cholesterol, calories, lipotropics, fiber, fruits and vegetables, vitamins, and alcohol. In a field moving as rapidly as this one is now, we can expect to miss a few late-breaking developments, but generally, the literature has been well covered through some time in 1988. Work relating to the effects of diet on oncogenes is in its very early development and has not been addressed as an entity per se.

In the three decades of its existence, the annual Going Romance conference has turned out to be the major European discussion forum for theoretically relevant research on Romance languages where current theoretical ideas about language in general and about Romance languages in particular are exchanged. The twenty-ninth Going Romance conference was organized by the Radboud University and took place in December 2015 in Nijmegen. The present volume contains a selection of 18 peer-reviewed articles dealing with syntax, phonology, morphology, semantics and acquisition of the Romance languages. They represent the wide range of topics at the conference and the variety of research carried out on Romance languages within theoretical linguistics and will be of interest to scholars in Romance and in general linguistics.

Hair Analysis in Clinical and Forensic Toxicology is an essential reference for toxicologists working with, and researching, hair analysis. The text presents a review of the most up-to-date analytical methods in toxicological hair analysis, along with state-of-the-art developments in the areas of hair physiology, sampling, and pre-treatments, as well as discussions of fundamental issues, applications, and results interpretation. Topics addressed include the diagnosis of chronic excessive alcohol drinking by means of ethyl glucuronide (EtG) and fatty acid ethyl esters (FAEE), the early detection of new psychoactive substances, including designer drugs, the development of novel approaches to screening tests based on mass spectrometry, and the detection of prenatal exposure to psychoactive substances from the analysis of newborn hair. Unites an international team of leading experts to provide an update on the cutting-edge advances in the toxicological analysis of hair Demonstrates toxicological techniques relating to a variety of scenarios and exposure types Ideal resource for the further study of the psychoactive substances, drug-facilitated crimes, ecotoxicology, analytical toxicology, occupational toxicology, toxicity testing, and forensic toxicology Includes detailed instructions for the collection, preparation, and handling of hair, and how to best interpret results

Beer in Health and Disease Prevention is the single comprehensive volume needed to understand beer and beer-related science. Presenting both the concerns and problems of beer consumption as well as the emerging evidence of benefit, this book offers a balanced view of today's findings and the potential of tomorrow's research. Just as wine in moderation has been proposed to promote health, research is showing that beer – and the ingredients in beer – can have similar impact on improving health, and in some instances preventing disease. This book addresses the impact of beer and beer ingredients on cancers, cardiovascular disease, anti-oxidant benefits, and other health related concerns. It offers a holistic view from beer brewing to the isolation of beer-related compounds. It contains self-contained chapters written by subject matter experts. This book is recommended for scientists and researchers from a variety of fields and industries from beer production to health-care professionals. Winner of the 2009 Best Drinks and Health Book in the World - Gourmand World Cookbook Awards The most comprehensive coverage of the broad range of topics related to the role of beer and beer ingredients in health

Addresses the impact of beer and beer ingredients on cancers, cardiovascular disease, anti-oxidant benefits, and other health related concerns Presents a holistic view from beer brewing to the isolation of beer-related compounds Appropriate for scientists and researchers from a variety of fields and industries from beer production to health-care professionals Consistent organization of each chapter provides easy-access to key points and summaries Self-contained chapters written by subject matter experts This book contains the papers presented at the International Conference on Current Issues of Science and Research in the Global World, held at the premises of the Vienna University of Technology from May 27 to May 28, 2014. The book represents a significant contribution to Law, Economics, Information & Communication Technologies, Journalism and Psychology, including topical research work in the presented fields. This interdisciplinary volume is also essential reading for all those interested in international pluralism in terms of scientific contributions. The Pan-European University, respecting its own vision and ambition to become a well-known institution within the Global Research Area, traditionally elaborates research and scientific collaboration across national borders. The educational principles and research attitudes of the Pan-European University grasp the traditions of many cultures and geographic areas. The International Conference on Current Issues of Science and Research in the Global World was part of a series of similar top-rated international events organized by the Pan-European University, bringing together scientists, professionals, policymakers and representatives of culture from many countries.
