This volume, the third in the official history of the Atomic Energy Commission, makes sizable contributions in several areas, including the Eisenhower presidency. During the years in which work on the book has moved forward, that presidency has been one of historiographical frontiers, an area of exciting explorations and new developments. A "revisionism" has emerged to challenge a conception that had taken shape earlier and was quite negative in its appraisal of Eisenhower. Some findings of the revisionists now seem quite firmly established, but the new interpretation has not swept the field. Challenges to it have also appeared. A volume focusing on nuclear energy cannot make contributions to all aspects of the controversy over President Eisenhower, but this book can and does have much to say about some main features of the debate. In the process, the book illustrates, as did the earlier volumes in the series, how very good "official history" can be. This book on the Atomic Energy Commission is not a narrow history of a government agency. Dealing with the AEC during the period when issues concerning nuclear weapons and nuclear power emerged as large public concerns, the volume ranges well beyond the commission. Much of the work deals with Eisenhower. Although not uncritical, the authors find much to admire in him. Subjects and topics covered include: Dwight Eisenhower, Harold Stassen, Lewis Strauss, Nuclear Testing, nuclear power,

Paving Our Ways covers the international history of road paving in an interesting, readable and technically accurate way. It provides an overview of the associated technologies in a historical context. It examines the earliest pavements in Egypt and Mesopotamia and then moves to North Africa, Crete, Greece and Italy, before a review of pavements used by the Romans in their magnificent road system. After its empire collapsed, Roman pavements fell into ruin. The slow recovery of pavements in Europe began in France and then in England. The work of Trésaguet, Telford and McAdam is examined. Asphalt and concrete slowly improved as paving materials in the second part of the 19th century. Major advances occurred in the 20th century with the availability of powerful machinery, pneumatic tyres and bitumen. The advances needed to bring pavements to their current development are explored, as are the tools for financing, constructing, managing and maintaining pavements. The book should appeal to those interested in road paving, and in the history of engineering and transport. It can also serve as a text for courses in engineering history.

This book focuses on exploring the linkages between natural disasters and sustainable

development at the global, regional, and national levels. Disasters and development are closely related, yet the disciplinary silos prevail and there is little communication and cooperation between the disaster management, environment, and development communities. One catastrophic event, such as an earthquake, tsunami, or cyclone, can destroy infrastructure, people's lives and livelihoods, and set back development. Similarly, slow onset disasters—often associated with global climate change—pose threats to development, livelihoods, food security, and long-term sustainable development. This book is uniquely aimed at bridging the gaps between the environmental, development, and disaster management communities. It traces the evolution of concepts and practice and highlights the linkages between natural disasters and sustainable development in key sectors, including food security, health, and water. The book includes case studies from the field highlighting the complex issues that challenge sustainable development and disaster risk management in practice. It draws policy conclusions for the global community based on state-of-the-art knowledge from research and practice. The primary target groups for the book are researchers, including graduate students, in the fields of environment and sustainable development, geography, disaster risk reduction, and climate change studies. The second target group comprises practitioners and policymakers working in national and international organizations, the private sector, and civil society.

This is a self-help book centered on a nonscientific approach to the various roles the mind and the brain play in our lives. The basis for the approach is the authors research and experience working with patients related to stress management. It is a common-sense text that deals with stress and mindfulness and offers a new way of looking at how we live our lives. In between each chapter, suggestions are included on how to be more present in the moment, more mindful, which are designed to supplement the chapter material.

As the new subtitle indicates, the book emphasizes the logic of methods to provide the student a solid basis for future methodology changes, enhancing the integrated approach of the previous edition. Among the author’s many goals are for users to: understand research’s contribution to knowledge building as a social process through which findings become accepted as knowledge; acquire the background to read, analyze, and understand research using a variety of approaches as well as the hallmarks necessary to evaluate each method; and realize that the responsibility for ethical research is fundamentally theirs and that value choices are involved, beginning with the choice of research problem. Updates to the new edition include an extensive example of the use of the

computer in the literature search and a new chapter on the reflective researcher. The expanded treatment of qualitative research includes the pros and cons of using software in qualitative analysis. Conceptual analysis, an important concept missing from the second edition, has returned by request because of its widely employed logic in both qualitative and quantitative methods. The author has acknowledged the troublesome nature of the concepts internal validity and external validity and has more clearly defined these important foundational concepts as Internal Integrity and External Generality. Useful tools to facilitate learning include additional reading lists, important terms and concepts, tips on effective research methods and hallmarks of methods, application problems and exercises, a glossary, and an appendix on writing a research proposal.
