"This research and development effort, called Combined Arms Operations at Brigade Level, Realistically Achieved Through Simulation III (COBRAS III), designed simulation -based, structured training for the staffs of the conventionally-equipped brigade combat team (BCT). The effort included designing a progressive approach to presenting and utilizing training objectives. The resulting product was a set of "performance objectives" that provides techniques and procedures for command and staff performance. The performance objectives resulted from and support the purpose of the training, which is to facilitate BCT preparation for combat training center rotations and deployment. The performance objective concept was an extension of the task analysis work conducted during the two proceedings projects. -- COBRAS I and COBRAS II."--DTIC.

This book develops an original version of act-consequentialism. It argues that act-consequentialists should adopt a subjective criterion of rightness. The book develops new arguments which strongly suggest that, according to the best version of act-consequentialism, the rightness of actions depends on expected rather than actual value. Its findings go beyond the debate about consequentialism and touch on important debates in normative ethics and metaethics. The distinction between criterion of rightness and decision procedures addresses how, why, and in which sense moral theories must be implemented by ordinary persons. The discussion of the rationales of "ought" implies "can" leads to the discovery of a hitherto overlooked moral principle, "ought" implies "evidence", which can be used to show that most prominent moral theories are false. Finally, in the context of discussing cases that are supposed to reveal intuitions that favour either objective or subjective

consequentialism, the book argues that which cases are relevant for the discussion of objectivism and subjectivism depends on the type of moral theory we are concerned with (consequentialism, Kantianism, virtue ethics, etc.). From Value to Rightness will be of interest to scholars and advanced students working in normative ethics and metaethics.

This book traces the development of RDA, explaining why it was needed and how it was developed. The basics of the conceptual models for RDA are covered, showcasing the origins of the structure and vocabulary of RDA. It then compares AACR2 to RDA and looks at specific changes in the cataloging code. The author also addresses how this development may enable library data to be housed on the Semantic Web and provides practical advice that librarians and catalogers can act upon now to prepare for RDA.

In *Why Believe?* (Continuum) Professor John Cottingham argued that every human being possesses impulses and aspirations for which religious belief offers a home. His new book, *How to Believe* is concerned not so much with why we should believe as with what leads a person to become a believer. Cottingham challenges believers and non-believers alike to think afresh about the need to change their lives and about what such change might involve.

Based on the author's own involvement as an engineer at the company through the 1950s and early 1960s and on more recent research of the archives at Brooklands Museum and the PRO, this book explains the successes and failures of leading-edge developments at Vickers, in the early days of guided weapons. John Forbat explains missile and avionics systems and trials, with diagrams and photographs, and tells the story of the company and its individuals. Projects covered in depth include Red Rapier, Blue Boar, Red Dean and Vigilant anti-tank missile, of which the author has first-hand experience as he started working for Vickers as a graduate apprentice assembling airplanes and soon graduated into Special Projects where he was responsible for many of the trials.

The publication of this third edition of the definitive text on clinical forensic medicine comes at an exciting time for a subject now gaining recognition as a speciality in the medical establishment. This growing acknowledgement reflects

the fact that increasing numbers of health professionals are becoming engaged in general forensic services. Nurses and paramedics are more involved than ever in custody care, while nurses themselves are conducting more examinations in cases involving alleged sexual offences. Thus it is vital that those caring for this vulnerable group of patients (whether detainees or complainants) have the tools to master this specialist set of skills. All the chapters in this new edition have been fully updated, with some undergoing extensive revision. Recent developments in child protection protocols have prompted a major rewrite of the chapter on non-accidental injury, and the text now includes a specific chapter on the use of the TASER. Other aspects of restraint are now dealt with separately. The material on care of detainees and fitness for interview has been split into individual chapters to allow a more comprehensive discussion of the issues. In addition, new authors have joined the team of contributors, facilitating a wider range of international perspectives. From its chapters on the history and core principles of clinical forensic medicine, right up to the text's discussion of substance misuse and deaths in custody, this volume remains the gold standard source for health professionals whose working lives bring them into contact with those in the law enforcement arena.
