Management accounting has been the basic toolbox in business administration for decades. Today it is an integral part of all curricula in business education and no student can afford not to be familiar with its basic concepts and instruments. At the same time, business in general, and management accounting in particular, is becoming more and more international. English clearly has evolved as the "lingua franca" of international business. Academics, students as well as practitioners exchange their views and ideas, discuss concepts and communicate with each other in English. This is certainly also true for management accounting and control. Management Accounting is becoming more and more international. ?Management Accounting and Control? is a new textbook in English covering concepts and instruments of management accounting at an introductory level (primarily at the Bachelor level, but also suited for general management and MBA courses due to a strong focus on practical relevance). This textbook covers all topics that are relevant in management accounting in business organizations that are typically covered in German and Central European Bachelor courses on management accounting and control. After a general introduction to the field of management accounting and control the book discusses cost management as an extension of cost accounting. Typical cost management instruments such as target costing, life cycle costing and process-based costing approaches are explained in detail. Differences between Anglo-American activity-based costing (ABC) and German process-based costing are highlighted. The book then turns to an extensive discussion of planning and budgeting tasks in management accounting with a strong focus on the practical application of the topic such as developing a budget in practice. Another chapter is dedicated to a comparison of traditional budgeting with modern /alternative budgeting approaches. A major part of the book is dedicated to the broad area of performance management. The relevance of financial statement information for performance management purposes is discussed in detail. In addition, the most widely spread financial performance indicators are illustrated using real-world examples. The book also includes detailed content on value-based management control concepts. In a consecutive chapter, performance measurement is linked with strategy while extensively discussing the Balanced Scorecard as a key tool in strategic performance management. The remaining parts of the book deal with management reporting as one of the main operative tasks in management accounting practice. The book closes with insight into new fields and developments that currently influence management accounting practices and research and promise to play an increasingly important role in the future.

Rev. ed. of: Cost accounting: a managerial emphasis / Charles T. Horngren ... [et al.]. 13th ed.

The 16th volume scrutinizes the role and influence of accounting within the social struggles of our time, in fields such as ethics, sustainability, and education. The research reveals the ability of using the discipline as a tool for affirmation and empowerment within governance, politics, and social practice.

Features articles on: information overload and multiple constituency values related to environmental and social disclosures; the extent to which product life cycle cost analysis, customer involvement and cost management contribute to the competitive advantage of firms; and, more.

Current management accounting techniques have not been widely accepted as a means to develop a competitive advantage. The information obtained from the literature reviewed and the results from an empirical study that involved a sample of forty respondents from Equity Bank found that the modern management accounting practices provide very important skills and techniques in building competitiveness. The practices play an important role in the planning, developing, implementing and evaluating strategic competitive policies that result in a competitive advantage. The study outlines the importance of management accounting practices in providing strategies that lead to the creation of a competitive advantage in an organisation. However, the conclusions are drawn on a conceptual level and a future empirical investigation is needed to substantiate these claims further. The study also sets a foundation for more focused research into the importance of modern management accounting practices in developing a competitive advantage especially in the banking sector.

Economic principles inform good business decision making. Although economics is sometimes dismissed as a discourse of practical relevance to only a relatively small circle of academicians and policy analysts who call themselves economists, sound economic reasoning benefits any manager of a business, whether they are involved with production/operations, marketing, finance, or corporate strategy. Along with enhancing decision making, the field of economics provides a common language and framework for comprehending and communicating phenomena that occur within a business, as well as between a business and its environment. This text addresses the core of a subject commonly called managerial economics, which is the application of microeconomics to business decisions. Key relationships between price, quantity, cost, revenue, and profit for an individual firm are presented in form of simple conceptual models. The text includes key elements from the economics of consumer demand and the economics of production. The book discusses economic motivations for expanding a business and contributions from economics for improved organization of large firms. Market price quantity equilibrium, competitive behavior, and the role of market structure on market equilibrium and competition are addressed. Finally, the text considers market regulation in terms of the generic problems that create the need for regulation and possible remedies for those problems. Although the academic literature of managerial economics often employs abstract mathematics and large corporations create and use sophisticated mathematical models that apply economics, this book focuses on concepts, terminology, and principles,

with minimal use of mathematics. The reader will gain a better understanding of why businesses and markets function as they do and how those institutions can function better.

"Management and Cost Accounting" is a new English language textbook covering concepts and instruments of cost and management accounting at an introductory level (Bachelor, but also suited for MBA courses due to strong focus on practical applications and cases). This textbook covers all topics that are relevant in management accounting in business organizations and that are typically covered in German and Central European Bachelor classes on cost accounting and management accounting. After an introduction to the topic, including major differences between the German approach and the purely Anglo-Saxon approach of management accounting, the book describes different cost terms and concepts applied in German cost accounting, The book is much more specific here compared to US-American standard textbooks. Based on different cost concepts, the topic of cost behavior is discussed, including the determination of cost functions. The heart of the book guides the reader through the general structure of a fully developed cost accounting system following the German and Central European standard: It starts with cost type accounting, moves on to cost center accounting and finally deals with cost unit accounting, assigning cost to goods and services offered in the market. The remaining parts of the book deal with decision making and how management and

cost accounting data can support managers in this task. A comparison of absorption costing and variable costing introduces the reader to management decisions such as product portfolio and outsourcing decisions. Additionally, cost-volume-profit analysis (break-even-analysis) is covered. The book closes with a comprehensive treatment of cost planning and variance analysis.
