

Doctor Who Official Annual 2013

'Het blinde licht' van Benjamín Labatut gaat over Fritz Haber, Werner Heisenberg, Alexander Grothendieck – grote natuurwetenschappers die de loop van de twintigste eeuw hebben veranderd. En de mensheid dichterbij de afgrond hebben gebracht. 'Het blinde licht' is een roman over menselijke (over)moed en de morele consequenties van wetenschappelijke vooruitgang. En over de onmetelijke verbeelding die nodig is om het ondenkbare te bedenken.

Essentials of Health Economics, Second Edition examines the public health care system through the lens of economic theory. Through the use of numerous examples and profiles related to the field, students will learn the importance health economics and its relevance to more general analysis of health policy issues. This text is ideal for courses in programs of public health, health administration, and allied health professions as it conveys the essence of the economic issues at hand while avoiding complicated methodological issues that would interest only students of economics. Written with the non-specialist in mind, the book focuses on how to do descriptive, explanatory and evaluative economics in a systematic way. The Second Edition features: * Highly accessible content * Ideal for students with a modest quantitative background * Real world examples throughout, giving the student hands-on experience in actual policy-related issues as economic concepts are introduced. * Comprehensive coverage of the specifics of the health care markets, the evaluation of health care services delivered, and health care reform * Updated statistics and references throughout * New chapters on Noncompetitive Market Models and Market Failures; International Health System Issues and Reform; and National and State Health Care Reforms Instructor Resources: Instructor's Manual, PowerPoint Lecture Slides, Test Bank

This annual report assesses the nation's health by presenting trends and current information on selected measures of morbidity, mortality, health care utilization and access, health risk factors, prevention, health insurance, and personal health care expenditures.

Addresses the vexed question of how and why reform of end-of-life law occurs, drawing on ten international case studies.

Burnout affects a third of our population and over half of our health professionals. For the second group, the impact is magnified, as consequences play out not only on a personal level, but also on a societal level and lead to medical errors, suboptimal care, low levels of patient satisfaction, and poor clinical outcomes. Achieving wellbeing requires strategies for change. In this book, Dr. Pipas shares twelve lessons and strategies for improved health that she has learned from patients, students, and colleagues over her twenty years working as a family physician. Each lesson is based on observation and research, and begins with a story of an exemplary patient whose challenges and successes reflect the theme of the lesson. Along with the lessons, the author offers plans for action, which taken together create the framework for a healthy life. Each lesson concludes with resources and a "health challenge."

Our Social World: Introduction to Sociology, Condensed, inspires students to develop their sociological imaginations, to see the world and personal events from a new perspective, and to confront sociological issues on a day-to-day basis. The award-winning author team of Jeanne H. Ballantine, Keith A. Roberts, and Kathleen Odell Korgen organizes the text around the "Social World Model," a conceptual framework that demonstrates the relationships among individuals (the micro level); organizations, institutions, and subcultures (the meso level); and societies and global structures (the macro level). The application of this model across chapters helps students practice using the three levels of analysis and view sociology as an integrated whole rather than a set of discrete subjects. The Fifth Edition of the Condensed version is adapted from Our Social World: Introduction to Sociology and is one-third shorter by streamlining boxes and the main narrative, and combining four chapters into two (Family/Education, and Politics/Economics). New and Key Features A new full-length chapter on health, illness, and healthcare has been added. Several chapters have been reorganized with updated data, added studies, and newly emerging emphases in sociology. Six new "Sociologists in Action" features added. Four new "Engaging Sociology" features added with new opportunities for data analysis by students. 100 new or updated Tables and Figures, nearly 500 new references, and dozens of older references removed. Many sentences and definitions in the book have been revised for brevity and clarity, and the glossary has been updated for better correspondence with the text. Links to exceptional teaching resources from A.S.A.'s TRAILS (Teaching Resources and Innovation Library for Sociology) available in SAGE coursepacks. MCAT Guide maps chapter content to Foundational Concepts and Content Categories in Section 3 of the MCAT test available in SAGE coursepacks.

This book defines the phenomenon of mHealth and its evolution, explaining why an understanding of mHealth is critical for decision makers, entrepreneurs and policy analysts who are pivotal to developing products that meet the collaborative health information needs of consumers and providers in a competitive and rapidly-changing environment. The book examines trends in mHealth and discusses how mHealth technologies offer opportunities for innovators and entrepreneurs, those who often are industry first-movers with regard to technology advancement. It also explores the changing dynamics and relationships among physicians, patients, insurers, regulators, managers, administrators, caregivers and others involved in the delivery of health services. The primary focus is on the ways in which mHealth technologies are revising and reshaping healthcare delivery systems in the United States and globally and how those changes are expected to change the ways in which the business of healthcare is conducted. mHealth: Transforming Healthcare consists of nine chapters that addresses key content areas, including history (to the extent that dynamic

technologies have a history), projection of immediate evolution and consistent issues associated with health technology, such as security and information privacy and government and industry regulation. A major point of discussion addressed is whether mHealth is a transient group of products and a passing patient encounter approach, or if it is the way much of our health care will be delivered in future years with incremental evolution to achieve sustainable innovation of health technologies.

This book presents the most recent comparable data on the performance of health systems in OECD and certain partner countries. It includes a dashboard of health indicators, a special focus chapter on the pharmaceutical sector, and indicators on health workforce migration and health care quality.

The essential guide by one of America's leading doctors to how digital technology enables all of us to take charge of our health. A trip to the doctor is almost a guarantee of misery. You'll make an appointment months in advance. You'll probably wait for several hours until you hear "the doctor will see you now"-but only for fifteen minutes! Then you'll wait even longer for lab tests, the results of which you'll likely never see, unless they indicate further (and more invasive) tests, most of which will probably prove unnecessary (much like physicals themselves). And your bill will be astronomical. In *The Patient Will See You Now*, Eric Topol, one of the nation's top physicians, shows why medicine does not have to be that way. Instead, you could use your smartphone to get rapid test results from one drop of blood, monitor your vital signs both day and night, and use an artificially intelligent algorithm to receive a diagnosis without having to see a doctor, all at a small fraction of the cost imposed by our modern healthcare system. The change is powered by what Topol calls medicine's "Gutenberg moment." Much as the printing press took learning out of the hands of a priestly class, the mobile internet is doing the same for medicine, giving us unprecedented control over our healthcare. With smartphones in hand, we are no longer beholden to an impersonal and paternalistic system in which "doctor knows best." Medicine has been digitized, Topol argues; now it will be democratized. Computers will replace physicians for many diagnostic tasks, citizen science will give rise to citizen medicine, and enormous data sets will give us new means to attack conditions that have long been incurable. Massive, open, online medicine, where diagnostics are done by Facebook-like comparisons of medical profiles, will enable real-time, real-world research on massive populations. There's no doubt the path forward will be complicated: the medical establishment will resist these changes, and digitized medicine inevitably raises serious issues surrounding privacy. Nevertheless, the result-better, cheaper, and more human health care-will be worth it. Provocative and engrossing, *The Patient Will See You Now* is essential reading for anyone who thinks they deserve better health care. That is, for all of us.

So you want to be a doctor? Be confident and fully prepared for every step of your medical school application. Packed with insight, tips, and information you won't find anywhere else, this essential guide helps applicants succeed against tough competition.

Years of reader evaluations yield a record of overwhelming positive teaching results. Teachers agree that *The New International Lesson Annual* gets highest marks for helping Christian educators in the classroom, making Scripture understandable or intelligible, relating Scripture to contemporary living, and challenging students to respond with positive life-changing actions. Based on the Bible study foundations of America's leading ecumenical Bible educators and editors in the venerable Committee on Uniform Series. Inside discover:

- Easy-to-use design with tint boxes, thumb index, goals for learners, and a key-word pronunciation guide
- Easy-on-the-eyes clear type
- The only lesson commentary with popular easy-to-understand NRSV and CEB translations (Combined with your own King James Bible, NIV, or any other Bible translation, you have a multiversion parallel.) [Karla, multi- forms a closed compound]
- Eight pages of Bible background, interpretation, and step-by-step lesson plans keyed to learner goals for each lesson make lesson preparation thorough without requiring difficult and tedious research
- In-depth quarterly teacher enrichment articles and Bible background covering both the big picture and close-up views. Complete index to background Scriptures and occasional additional helps such as maps, charts, and timelines
- "Faith in Action" section gives ideas for placing faith concepts of the lessons into action
- "Preparing Our Hearts" section with Bible reading and reflection questions for the teacher's personal spiritual growth
- "Continue the Journey" section includes ideas for prayer, learner preparation for next week's session, activities the learners can do during the coming week to live out what they have learned, and a suggested closing hymn and benediction

Derived from the renowned multi-volume *International Encyclopaedia of Laws*, this convenient volume provides comprehensive analysis of the law affecting the physician-patient relationship in France. Cutting across the traditional compartments with which lawyers are familiar, medical law is concerned with issues arising from this relationship, and not with the many wider juridical relations involved in the broader field of health care law. After a general introduction, the book systematically describes law related to the medical profession, proceeding from training, licensing, and other aspects of access to the profession, through disciplinary and professional liability and medical ethics considerations and quality assurance, to such aspects of the physician-patient relationship as rights and duties of physicians and patients, consent, privacy, and access to medical records. Also covered are specific issues such as organ transplants, human medical research, abortion, and euthanasia, as well as matters dealing with the physician in relation to other health care providers, health care insurance, and the health care system. Succinct and practical, this book will prove to be of great value to professional organizations of physicians, nurses, hospitals, and relevant government agencies. Lawyers representing parties with interests in France will welcome this very useful guide, and academics and researchers will appreciate its comparative value as a contribution to the study of medical law in the international context.

This book empirically examines health care financing reforms and popular responses in three major cities in East Asia: Shanghai, Singapore, and Hong Kong. It adopts a new revised version of the theory of historical institutionalism to compare and explain the divergent reform paths in these three places over the past three decades. It also examines

forces that propel institutional change. The book provides three detailed case studies on the development of health care financing reforms and the politics of implementing them. It shows that health care systems in Shanghai, Singapore, and Hong Kong were the products of Western presence in the nineteenth century. It illustrates how greater attention is paid to the roles played by ideas, actors, and environmental triggers without abandoning the core assumptions that political institutions and policy feedback remain central to impact health care financing reforms. It shows that health care financing reform is shaped by a complex interplay of forces over time. It also provides the most updated material about health care financing reforms in Shanghai, Singapore, and Hong Kong. The central argument of this book is that health care financing reform is both an evolving process responding to changing circumstances and a political process revealing an intricate interplay of power relationships and diverse interests. It shows that institutional changes in health care financing system can be incremental but transformative in nature. It argues that social policies will continue to develop and welfare states will continue to adapt and evolve in order to cope with new risks and needs. This book sheds new lights on understanding the politics of health care financing reform and sources and modes of institutional change.

Introduces the reader to the production of the products in refinery • Introduces the reader to the types of test methods applied to petroleum products, including the need for specifications • Provides detailed explanations for accurately analyzing and characterizing modern petroleum products • Rewritten to include new and evolving test methods • Updates on the evolving test methods and new test methods as well as the various environmental regulations are presented

The impact of cyberspace on newsprint journalism is at the core of this text. After a brief history of U.S. news dailies and weeklies it turns attention to those journals' status today. A wide range of forces that impinge on their success and failure are explored, including the decline of their relevancy for an increasing percentage of the population. Newspapers' prospects for the future is the primary focus as papers curtail their dependency on historically physically-delivered patterns to shift to more economical and faster methods of supplying the news. Rivals for the attention of traditional readers are burgeoning. Possibilities for the outcome over the next decade are investigated. The profound effects of change on newsrooms, advertising, circulation, economics, and the place of newspapers and their communities are fully examined.

From the parking lot to the exam room, doctors can improve the physical surroundings for their patients, yet often they do not. Given the numerous and varied duties doctors must perform, it may fall to the design profession to implement changes, many based on research, to improve healthcare experiences. From location and layout to furnishings and positive distractions, this book provides evidence-based information about the physical environment to help doctors and those who design medical workspaces improve the experience of health care. Along with its research base, a special aspect of this book is the integration of relevant historical material about the office practice of physicians at the beginning of the twentieth century. Many of their design solutions are viable today. In addition to improving the physical design of healthcare facilities, author Ann Sloan Devlin is the granddaughter, daughter, and niece of physicians, as well as the granddaughter and daughter of nurses. She worked in a hospital during college, and has visited a good many practitioners' offices in medical office buildings and ambulatory care settings. This book addresses an overlooked location of care: the doctor's office suite.

These proceedings represent the work of authors at the 13th European Conference on e-Government (ECEG 2013). The Conference this year is hosted by the University of Insubria in Como, Italy. The Conference Chair is Professor Walter Castelnovo and the Programme Chair is Professor Elena Ferrari, both are from the Department of Theoretical and Applied Sciences at the University of Insubria. The opening keynote address is given by Dr Gianluca Misuraca from the European Commission, Joint Research Centre, Institute for Prospective Technological Studies, Seville, Spain and Gianluca is addressing the topic "eGovernment: Past, Present & Future: A policy-research perspective for renewing governance in the digital age." The second day of the conference is opened by Dr Antonio Cordella from the London School of

Economics, London, UK, who will talk about "Public value creation: the new challenge for e-government policies." ECEG brings together, researchers, Government officials and practitioners in the area of e-Government from around the world. Participants are able to share their research findings and explore the latest developments and trends in the field which can then be disseminated to the wider community. With an initial submission of 153 abstracts, after the double blind, peer review process there are papers published in these Conference Proceedings from 40 countries including Australia, Austria, Belgium, Brazil, Canada, China, Costa Rica, Croatia, Denmark, Egypt, Germany, Greece, India, Iran, Iraq, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malaysia, Netherlands, New Zealand, Norway, Pakistan, Poland, Romania, Russia, Saudi Arabia, Serbia, Slovenia, South Africa, Spain, Sweden, Switzerland, Taiwan, Thailand, Turkey, UK and USA. This will ensure a very interesting two days.

China's current social medical insurance system has nominally covered more than 95 per cent of 1.4 billion population in China and is moving towards the ambitious goal of universal health insurance coverage. Challenges posed by a rapidly ageing population, an inherently discriminatory design of the health insurance system, the disorder of drug distribution system and an immature legal system constrain the Chinese government from realizing its goal of universal health insurance coverage in the long run. This book uses a refined version of historical institutionalism to critically examine China's pathway to universal health insurance coverage since the mid-1980s. It pays crucial attention to the processes of transforming China's healthcare financing system into the basic social medical insurance system alongside rapid socio-economic changes. Financing Healthcare in China will interest researchers and government and think-tank officials interested in the state of healthcare reforms in China. Healthcare specialists outside of East Asia may also be interested in its general study of healthcare in developing countries. Scholars and students interested in the healthcare field will also find this useful.

Although China's new healthcare reform, launched in 2009, has achieved remarkable results in improving China's medical and healthcare system, it is recognised that there is still room for further improvement. This is especially important as China's population ages, the prevalence of chronic diseases increases and environment-related health risks worsen. This book reports on a major international research project which examined health trends, modes of health promotion, health finance systems, medical and healthcare innovations and environment-related health risks in China. For each of these key areas, the book considers the current situation in China and likely future trends, explores best practice from a wide range of foreign countries and puts forward proposals for improvements. Overall, the book provides a major assessment of China's medical and healthcare system and how it should be reformed.

In een prettig en rustig bejaardenhuis vormen vier bewoners een onwaarschijnlijk clubje. Een keer per week, op de donderdag, ontmoeten ze elkaar om onopgeloste moorden te onderzoeken. Als een vastgoedontwikkelaar uit het nabijgelegen stadje wordt vermoord komt 'de moordclub' in actie; het is hun eerste grote zaak. Tot hun verbazing lijkt de moord alles te maken te hebben met hun eigen verzorgingshuis. De vier vrienden mogen dan wel behoorlijk op leeftijd zijn, ze hebben allemaal meer dan genoeg levenservaring. Maar zijn ze nog in staat om een moordenaar te vinden voor hij weer toeslaat?

Jason heeft een probleem. Hij kan zich niets meer herinneren van voordat hij wakker werd in een schoolbus. Hand in hand met een meisje dat zijn vriendinnetje Piper blijkt te zijn. Hij schijnt op een kostschool te zitten voor 'slechte kinderen' en heeft een beste vriend genaamd Leo. Hoe hij hier terecht is gekomen? Geen idee, maar iets is goed mis aan dit plaatje. Piper heeft een geheim. Haar vader wordt al drie dagen vermist en sinds die tijd heeft ze levendige nachtmerries die haar lijken te waarschuwen voor een groot gevaar. Op de een of andere manier kan haar vriendje zich haar niet meer herinneren en de schoolexcursie wordt verstoord door een aanval van vreemde wezens. Piper wordt samen met Jason en Leo meegenomen naar Kamp Halfbloed. En wat er daar aan de hand is...

The Doctor of Nursing Practice Essentials: A New Model for Advanced Practice Nursing, continues to be the only complete textbook for all eight American Association of Colleges of Nursing (AACN) Essentials of Doctoral Education for Advanced Practice Nursing. With DNP programs now found in every state, climbing from 25 to over 300 in the past 13 years, having a textbook dedicated to the DNP Essentials is imperative as faculty and students will use it as a template for future and existing programs. The newly revised Fourth Edition features updates and revisions to all chapters and expands on information relating to the current and future changes in today's complex healthcare environment. The text features the addition of new DNP project resources, with supplemental case studies highlighting DNP projects and the impact of this work. Every print copy of the text will include Navigate 2 Premier Access. This Access includes interactive lectures, competency mapping for DNP Essentials, case studies, assessment quizzes, a syllabus, discussion questions, assignments, and PowerPoint presentations.

China, with the world's largest population, numerous ethnic groups and vast geographical space, is also rich in languages. Since 2006, China's State Language Commission has been publishing annual reports on what is called "language life" in China. These reports cover language policy and planning initiatives at the national, provincial and local levels, new trends in language use in a variety of social domains, and major events concerning languages in mainland China, Hong Kong, Macau and Taiwan. Now for the first time, these reports are available in English for anyone interested in Chinese language and linguistics, China's language, education and social policies, as well as everyday language use among the ordinary people in China. The invaluable data contained in these reports provide an essential reference to researchers, professionals, policy makers, and China watchers.

What makes a good doctor? It's not what you think. A doctor willing to face their own uncertainty in the face of illness and treatment might just be the best medicine. Too often we choose the wrong doctor for the wrong reasons. It doesn't have to be that way. In *The Good Doctor*, Ken Brigham, MD, and Michael M.E. Johns, MD, argue that we need to change the way we think about health care if we want to be the healthiest we can be. Counterintuitive as it may seem, uncertainty is integral to medicine, and you want a doctor who knows that: someone who sees you as the unique case you are, someone who knows that data isn't everything, someone who is able to change her mind as the information changes. For too long we've clung to the myth of the infallible doctor--one who assuredly tells us this is what's wrong and here is how I will cure you--and our health has suffered for it. Brigham and Johns propose a new model of medicine, one that is comfortable with ambiguity and that centers on an equal partnership between patient and doctor. Uncertainty, properly embraced, opens a new universe of possibilities.

'Every story ever told really happened...' (The Doctor, 'Hell Bent', 2015) Stories are, fundamentally what Doctor Who is all about. In *Once Upon a Time Lord*, Ivan Phillips explores a wide range of perspectives on these stories and presents a lively and richly-varied analysis of the accumulated tales that constitute this popular modern mythology. Concerned equally with 'classic' and 'new' Who, Phillips looks at how aspects of the Time Lord's story have been developed on television and beyond, tracing lines of connection and divergence across various media. He discusses Doctor Who as a mythology that has drawn on its own past in often complex ways, at the same time reworking elements from many other sources, whether literary, cinematic, televisual or historical. *Once Upon A Time Lord* offers an original take on this singular hero's journey, reading the unsettled enigma of the Doctor in relation to the characters, narratives and locations that he has encountered across more than half a century.

"This is a detailed yet practical guide to planning, developing, and evaluating nursing curricula and educational programs. It provides a comprehensive and critical perspective on the totality of variables impacting curricular decisions... This book provides readers with a comprehensive overview of curriculum development, redesign, and evaluation processes and exposes them to the variables impacting curricular decisions... 92 - 4 Stars."Kathleen A. Poindexter, PhD, MSN, RN, CNE, Doody's Book Reviews New Edition of *The Leading Nursing Text on Curriculum Development and Evaluation!* This third edition of the leading nursing text on curriculum development and evaluation continues to address relevant NLN and AACN core competencies for curricula in all undergraduate and graduate nursing programs. Written for graduate students and faculty, this new edition responds to the many changes that have occurred in nursing and education since the second edition was published. These include the continued shortage of nursing faculty and the projected additional losses of experienced faculty due to impending retirements, as well as the implementation of the Affordable Care Act and Consensus Model for Advanced Practice Nursing. This third edition covers curriculum development and evaluation in detail and provides the knowledge and practical applications needed by new and experienced faculty to confidently embrace the academic role. With an emphasis on interdisciplinary collaboration throughout, the text focuses on the growth of simulation, guidance for new faculty transitioning from a clinical to academic role, developing curricula for practice and academic settings, program evaluation, accreditation activities, and recommendation for research in nursing education. Also addressed is the explosion of DNP programs across the country and its effect on practice and education, as well as the controversy surrounding the use of simulation. Chapter objectives, discussion points, learning activities, references and a glossary enhance learning and retention of material. The text is a valuable resource for CNE certification review. New to the Third Edition: New chapter: Role of Faculty in Curriculum Development and Evaluation New chapter: Financial Support and Budget Management for Curriculum Development New chapter: Research and Evidence-Based Practice in Nursing Education Emphasis on guiding the assimilation of new instructors into faculty roles of program and curriculum development, instructional design, and student evaluation New content on curriculum evaluation, financial support, and budget management Strong focus on Interdisciplinary Educational Collaboration throughout Addresses the need for preparing more faculty to educate thousands of new nurses as defined by the IOM Report, the Affordable Care Act, and the Consensus Model Instructor Materials including: PowerPoint slides, syllabi, teaching/learning strategies, learning activities and associated rubrics for grading.

This annual overview report of national trends in health statistics contains a Chartbook that assesses the nation's health by presenting trends and current information on selected measures of morbidity, mortality, health care utilization and access, health risk factors, prevention, health insurance, and personal health-care expenditures. Chapters devoted to population characteristics, prevention, health risk factors, health care resources, personal health care expenditures, health insurance, and trend tables may provide the health/medical statistician, data analyst, biostatistician with additional information to complete experimental studies or provide necessary research for pharmaceutical companies to gain data for modeling and sampling. Undergraduate students engaged in applied mathematics or statistical compilations to graduate students completing biostatistics degree programs to include statistical inference principles, probability, sampling methods and data analysis as well as specialized medical statistics courses relating to epidemiology and other health topics may be interested in this volume. The application of proper ethical systems and education programs is a vital concern in the medical industry. When healthcare professionals are held to the highest moral and training standards, patient care is improved. *Healthcare Ethics and Training: Concepts, Methodologies, Tools, and Applications* is a comprehensive source of academic research material on methods and techniques for implementing ethical standards and effective education initiatives in clinical settings. Highlighting pivotal perspectives on topics such as e-health, organizational behavior, and patient rights, this multi-volume work is ideally designed for practitioners, upper-level students, professionals, researchers, and academics interested in the latest developments within the healthcare industry.

WAT BLIJFT ER OVER ALS DE BESCHAVING TEN ONDER GAAT? EN HOEVER ZOU JE GAAN OM DIT TE BESCHERMEN?

Op een winterse avond in Toronto sterft de beroemde acteur Arthur Leander op het toneel terwijl hij de rol van zijn leven speelt. Diezelfde avond strijkt een dodelijk griepvirus neer op het Noord-Amerikaanse continent. De wereld zal nooit meer hetzelfde zijn. Twintig jaar later trekt Kirsten, een actrice van het Reizende Symfonieorkest, langs de nieuwe nederzettingen rondom de Grote Meren om Shakespeare op te voeren voor de overlevenden van de ondergang. En dan wordt haar hoopvolle nieuwe wereld wederom bedreigd.

This book discusses Asian medicine, which puts enormous emphasis on prevention and preservation of health, and examines how, in recent decades, medical schools in Asia have been increasingly shifting toward a curative approach. It offers an ethnographic investigation of the scenarios in China and India and finds that modern students and graduates in these countries perceive Asian medicine to be as important as Western medicine. There is a growing tendency to integrate Asian medicine with Western medical thought in the academic curriculum that has led to a gradual decline of Asian medical thought and practices. At the same time, there has been a massive rise in patent drugs, health products and cosmetics being sold under the brand names of Asian medicine or herbal medicine. Most of these drugs and health products do not follow the classical formulas found in the Asian medical texts. The book analyses these texts and concludes that contemporary Asian medicine rarely follows the classical texts, and in fact uses Asian medicine brands to sell Western health products and practices. With a particular focus on the formal and professional sector of Chinese herbal medicine and Indian ayurvedic medicine in urban areas, this book appeals to a broad readership, including undergraduate students and academics as well as non-experts. Md. Nazrul Islam is an Associate Professor in the General Education Office, United International College, Beijing Normal University-Hong Kong Baptist University. He was a Visiting Associate Professor in the School of Population and Public Health, University of British Columbia (2015-16) during which time he completed this book manuscript.

Stephen Fry werd als zevenjarige jongen naar een kostschool gestuurd, 300 kilometer van zijn ouderlijk huis. Met flair en humor vertelt hij genadeloos eerlijk over deze roerige schoolperiode, waarin hij pesterijen en lijfstraffen doorstond, een eerste grote liefde kende, een zelfmoordpoging deed en in de gevangenis belandde. Ingrijpende en vormende jaren, waarna hij als achttienjarige jongeman de wereld opnieuw tegemoet trad, vastbesloten om zijn eigen weg te gaan. Een jongensleven is even hilarisch en krankzinnig als ontroerend en onweerstaanbaar.
