New venture management requires all the skills obtained within the typical MBA program, and then some. While those entering traditional management positions within established companies might expect to find established customers, a degree of predictability, formalized procedures, and earnings that may be taken more-or-less for granted, new ventures often are launched into highly dynamic environments characterized by rapid technological change, inherent unpredictability, and an uncertain cash flow. Such ventures often require rapid growth to succeed. While new ventures offer those who initiate them a high degree of independence, excitement, and potential for great reward, they also bring high risk, stress, and greater potential for failure. Thus, it takes a special set of skills, techniques, and temperament to succeed. These skills, along with the potential risks and rewards and environmental settings and characteristics, are explored in the Encyclopedia of New Venture Management. Features & Benefits: 150 carefully selected signed entries (each with Cross References and Further Readings) are organized in A-to-Z fashion to give students easy access to the full range of topics in new venture management. A thematic Reader's Guide in the front matter groups related entries by broad topical and thematic areas to make it easy for users to find related entries at a glance, with themes that include "Entrepreneurial Decision Making," "Corporate Entrepreneurship," "Entrepreneurial Marketing," "Leadership & Human Resources," "Financing & Development," and more. A Chronology in the back matter helps students put individual events into broader historical context. A Glossary provides students with concise definitions to key terms in the field. This open access book focuses on explaining differences amongst organizations regarding various attributes, forms, and outcomes. By focusing on the how of new venture creation and management to produce well-established organizations, the authors aim to increase our

understanding of the antecedents of most management research assumptions. New ventures are the source of most newly created jobs generated in an economy, new industries and markets, innovative products and services, and new solutions to economic, social, and environmental problems. However, most management research assumes a well-established organization as the starting point of their theorizing. Building on the notion of guided attention, it details how entrepreneurs can allocate their transient attention to identify potential opportunities from environmental change and how entrepreneurs allocate their sustained attention to form beliefs about radical and incremental opportunities requiring entrepreneurial action. The authors explain how entrepreneurs build such communities and engage community members over time to co-construct potential opportunities for new venture progress. Using the lean startup framework, they connect the dots between the theorizing on identifying and co-constructing potential opportunities and the startup of new ventures. This leads to a new overarching framework based on are (1) co-creating a startup, (2) organizing a startup, and (3) performing a startup to bring together the many disparate threads of research on new ventures. The authors then theorize on the importance of knowledge in organizational scaling. Based on cutting-edge research from the leading entrepreneurship journals, this book expands knowledge on the cognitive aspect of the new venture creation process.
