Worldwide development of agriculture and industry creates burgeoning demands on natural resources. Management of the rivers and the surrounding landscape is one of the important tasks for today and for the foreseeable future. Lessons learned from centuries of management (and mismanagement) have been distilled into principles and practices which form the subject matter for this book. Despite noticeable growth in Islamic banking and finance literature in recent years, very few published books in this area deal with supervisory and regulatory issues in Islamic banking – theoretically or empirically – and none with the critical issue of risks involved in liquidity management of Islamic banks. This unique book is the first of its kind in dealing with challenges these financial institutions face in the absence of interest rate mechanism and debt-based financial instruments. The book examines critically issues involve in managing the risk of liquidity management for these types of institutions, including those stemming from Basel requirements. It then offers an alternative regulatory framework more appropriately suited for such banks without compromising safety and security. The book's unique features and innovative dimensions diagnostically differentiate between Islamic banks and conventional banks as related to liquidity management risks. It proposes a risk-sharing regulatory framework that, once implemented, would mitigate risks posed by balance-sheet mismatches. The book aims to assist regulators, supervisors, Islamic finance practitioners, academicians and other relevant stakeholders.

This edited volume brings together original scientific studies on current economic and developmental issues in the Balkan region, and is composed of papers by 25 authors from seven different countries. The Balkan region has gained significant interest in recent years due to its location and strategic position, representing a doorway to Europe, and the region's stability and progress have direct consequences on various European countries. Because of this strategic position, there is currently much debate regarding a potential partnership of the Balkan states with the European Union. This book offers insights into the current economic and developmental status of the countries in this region, offering a series of chapters that analyse the area from a variety of perspectives. It begins with a discussion on the recent history of the region, especially with reference to the former Yugoslavia and its break-up after the turbulence experienced in 1990s. Other sections are complementary to each other in that they offer comparisons of the Balkan states in their economic progress at the micro and macro levels. Topics such as European integration policies and effects, economic transition, regional trade, tax incentive policy, regional capital markets, regional development agencies and systems, remittances and foreign aid contributions, import-export policies, fiscal policies, analysis of regional microfinance, and the tourism sectors are explored in detail throughout the book.

Tourism is much more than an economic sector, it is also a social, cultural, political, and environmental force that drives societal change. Understanding, responding to, and managing this change will inevitably require knowledge workers who are able to address a range of problems associated with tourism, travel, hospitality, and the increasingly complex operating environment within which they exist. The purpose of this Handbook is to provide an insightful and authoritative account of the various issues that are shaping the higher educational world of tourism, hospitality and events education and to highlight the creative, inventive and innovative ways that educators are responding to these issues. It takes as its central focus a dynamic curriculum space shaped by internal and external factors from global to local scales, a variety of values and perspectives contributed by a range of stakeholders, and shifting philosophies about education policy, pedagogy and teaching practice. A benchmark for future curriculum design and development, it critically reviews the development of conceptual and

theoretical approaches to tourism and hospitality education. The Handbook is composed of contributions from specialists in the field, is interdisciplinary in coverage and international in scope through its authorship and content. Providing a systematic guide to the current state of knowledge on tourism and hospitality education and its future direction this is essential reading for students, researchers and academics in Tourism, Hospitality, Events, Recreation and Leisure Studies.

?Despite the large amounts of human and financial resources invested to foster democratic governance in developing countries, statistics show that the majority of these countries have not yet achieved significant improvements in living standards. While some regions make strides towards improving the living conditions of their citizens, Sub-Saharan Africa, for instance, is still trapped in poverty with more than 40% of its 600 million people living below the internationally recognized absolute poverty line of one US dollar per day. Poor governance and corruption should be highlighted as the most important systemic factors contributing to poverty in developing countries. As a result the institutional foundations of these countries are weakened, public funds are misappropriated, and policies and programs aimed at reducing poverty and fostering sustainable economic growth are undermined. It is therefore not surprising that a 2008 Transparency International report found a direct link between corruption and the failure of the societal institutions designed to achieve the Millennium Development Goals in the majority of developing countries. This book investigates the problems of democratic governance, particularly as they relate to corruption, and also whether democracy should be based on universal principles or local context and historical factors. It also analyses the rule of law, in promoting democratic governance and curbing corruption and if governmental, non-governmental organizations, and civil societies are effective in promoting democratic governance and curbing corruption. This book will go beyond identifying the challenges and offer plausible solutions that could be adapted to various developing countries. It is premised on the importance of bridging theory and practice, which has been lacking in most local and international development publications, making of interest to scholars and policy-makers alike concerned with public administration in developing countries.?

The aim of this book is to document for the first time the dimensions and requirements of effective integrated groundwater management (IGM). Groundwater management is a formidable challenge, one that remains one of humanity's foremost priorities. It has become a largely non-renewable resource that is overexploited in many parts of the world. In the 21st century, the issue moves from how to simply obtain the water we need to how we manage it sustainably for future generations, future economies, and future ecosystems. The focus then becomes one of understanding the drivers and current state of the groundwater resource, and restoring equilibrium to at-risk aquifers. Many interrelated dimensions, however, come to bear when trying to manage groundwater effectively. An integrated approach to groundwater necessarily involves many factors beyond the aquifer itself, such as surface water, water use, water quality, and ecohydrology. Moreover, the science by itself can only define the fundamental bounds of what is possible; effective IGM must also engage the wider community of stakeholders to develop and support policy and other socioeconomic tools needed to realize effective IGM. In order to demonstrate IGM, this book covers theory and principles, embracing: 1) an overview of the dimensions and requirements of groundwater management from an international perspective; 2) the scale of groundwater issues internationally and its links with other sectors, principally energy and climate change; 3) groundwater governance with regard to principles, instruments and institutions available for IGM; 4) biophysical constraints and the capacity and role of hydroecological and hydrogeological science including water quality concerns; and 5) necessary tools including models, data infrastructures, decision support systems and the management of uncertainty. Examples of effective, and failed, IGM are given. Throughout, the importance of the socioeconomic context that connects all effective IGM is emphasized. Taken as a whole, this work relates the many facets of effective IGM, from the catchment to global perspective.

This Financial System Stability Assessment report on Hong Kong Special Administrative Region (HKSAR) highlights that HKSAR's financial sector is very well regulated, with the capacity to withstand a diversity of shocks. The sector, however, faces major risks, which puts a significant premium on effective liquidity management, macroprudential oversight, and microprudential supervision. The regulation and supervision framework of the financial sector is of a high caliber, and displays a high level of compliance with international standards, but there remains scope for further strengthening. Financial market infrastructures are highly sophisticated, but further enhancements are needed to fully comply with new international standards.

This book offers new perspectives of transdisciplinary research, in methodological as well as theoretical respects. It provides insights in the two-fold bio-physical and the socio-cultural global embeddedness of local living conditions on the basis of selected empirical studies from Latin America, Asia, Africa, Australia and Europe. The theoretical foundations of ecological research and sustainability policies were developed at the end of the nineteenth century. They are largely based on investigations of living spaces and the evolution and differentiation of varied life forms. This perspective is embedded in the practical and theoretical European problem situations of the past and lacks social and cultural differentiation. The transformation of spatial and natural relations as a result of the globalization process is so radical that new theories are needed to solve 21st century ecological problems. Moreover, in view of the lack of an ontologically sound and promising strategy for transdisciplinary problem solving, as well as an acceptable consideration of the power of cultural schemas relating to natural living's interpretations, there is a strong need to focus on sustainable social practices, habits and routines, rather than on predominantly living spaces or eco-topes. This book elaborates on the transdisciplinary approach by reflecting on the theoretical heritage and a global perspective of sustainability, by focusing on the primary role of a social approach in sustainability research and by putting emphasis on cultural dimension of sustainability. It postulates that global sustainability is grounded in a global understanding of our everyday activities.

Financial regulation has entered into a new era, as many foundational economic theories and policies supporting the existing infrastructure have been and are being questioned following the financial crisis. Goodhart et al's seminal monograph "Financial Regulation: Why, How and Where Now?" (Routledge:1998) took stock of the extent of financial innovation and the maturity of the financial services industry at that time, and mapped out a new regulatory roadmap. This book offers a timely exploration of the "Why, How and Where Now" of financial regulation in the aftermath of the crisis in order to map out the future trajectory of financial regulation in an age where financial stability is being emphasised as a key regulatory objective. The book is split into four sections: the objectives and regulatory landscape of financial regulation; the regulatory regime for investor protection; the regulatory regime for financial institutional safety and soundness; and macro-prudential regulation. The discussion ranges from theoretical and policy perspectives to comprehensive and critical consideration of financial regulation in the specifics. The focus of the book is on the substantive regulation of the UK and the EU, as critical examination is made of the unravelling and the future of financial regulation with comparative insights offered where relevant especially from the US. Running throughout the book is consideration of the relationship between financial regulation, financial stability and the responsibility of various actors in governance. This book offers an important contribution to continuing reflections on the role of financial regulation, market discipline and corporate responsibility in the financial sector, and upon the roles of regulatory authorities, markets and firms in ensuring the financial health and security of all in the future.

This book defines the phenomenon of mHealth and its evolution, explaining why an understanding of mHealth is critical for decision makers, entrepreneurs and policy analysts who are pivotal to developing products that meet the collaborative health information needs of consumers and providers in a competitive and rapidly-changing environment. The book

examines trends in mHealth and discusses how mHealth technologies offer opportunities for innovators and entrepreneurs, those who often are industry first-movers with regard to technology advancement. It also explores the changing dynamics and relationships among physicians, patients, insurers, regulators, managers, administrators, caregivers and others involved in the delivery of health services. The primary focus is on the ways in which mHealth technologies are revising and reshaping healthcare delivery systems in the United States and globally and how those changes are expected to change the ways in which the business of healthcare is conducted. mHealth: Transforming Healthcare consists of nine chapters that addresses key content areas, including history (to the extent that dynamic technologies have a history), projection of immediate evolution and consistent issues associated with health technology, such as security and information privacy and government and industry regulation. A major point of discussion addressed is whether mHealth is a transient group of products and a passing patient encounter approach, or if it is the way much of our health care will be delivered in future years with incremental evolution to achieve sustainable innovation of health technologies.
