The third edition of Manual of Traumatic Brain Injury offers a thorough revision of the popular evidence-based guide to understanding and managing all levels of traumatic brain injury. Comprehensive in scope and concise in format, this reference describes the spectrum of injury from mild to severe and the continuum of care from initial injury to management of chronic sequelae. Chapters are designed with a practical clinical focus for targeted retrieval of content by topic area and for self-review. The text is organized into five sections. Part I addresses fundamental concepts necessary for understanding the underpinning of clinical decision-making. Part II is dedicated to mild TBI, including sport-related concussion, with chapters covering topics from natural history to associated somatic disorders, post-concussion syndrome, and PTSD. Part III covers moderate to severe TBI and details prehospital emergency and ICU care, rehabilitation, treatment of related conditions, and postinjury outcomes. Part IV focuses on TBI-related complications, including posttraumatic seizures, spasticity, behavioral and sleep disturbances, and chronic traumatic encephalopathy (CTE). Part V reviews special considerations in selected populations such as pediatric TBI and TBI in the military, as well as medicolegal and ethical considerations in TBI, complementary and alternative medicine, and return to work considerations. Each chapter includes boxed Key Points which underscore major clinical takeaways, Study Questions to facilitate self-assessment and further emphasize core chapter content, and an Additional Reading list for a deeper dive into chapter concepts. Significant updates incorporating recent advancements in the field, combined with the clinical acumen of its experienced contributors, make this third edition the essential manual for healthcare professionals caring for individuals with traumatic brain injury. Key Features: Succinct format encourages targeted access to key clinical information Completely revised and updated third edition reflects current state of the art advancements Added content areas such as a new chapter dedicated to substance abuse and TBI expand the scope of material addressed Newly added multiple choice Study Questions in each chapter facilitate self-assessment of mastery of chapter material

Courts with the right to constitutional review exert considerable power in a political system. However, especially for Kelsenian constitutional courts there are hardly any large-N studies. This is mainly due to a lack of data. For the German Federal Constitutional Court, this gap has been closed by building a novel database, the development of which is depicted in this book. Employing data from this database, the occurrence of separate opinions in general and their different types in particular are analyzed. The book introduces a new, universal theory that reconciles and expands existing explanations. In a second step, the theory is applied to the German Federal Constitutional Court. It can be proven that one factor that has been neglected so far plays a decisive role: The judges' behavior depends on the profession they pursue after their time in office. Moreover, the study shows that - contrary to the common literature - it is not mainly the topic that determines a case's conflict potential but rather the number of issues a decision has to address. Although economics is a relative newcomer to research into the determinants of good health, its significance should not be under-estimated. This book poses the important question of whether economic theory can be developed to explain why people engage in activities that are obviously a danger to their long-term health. In looking first at the individual's own decisions that affect his or her health, and then at the impact of other agent's decisions for the individual's health, the authors provide an exhaustive account of the important issues to be faced to ensure the best future for public health care. Contributors include such experts as Peter Zweifel, Donald S. Kenkel and Mark Pauly. Of great interest to advanced students of health economics, this book will also be extremely useful to students, academics and professionals involved in the sphere of public health.

Millions of children are dying each year with preventable and reversible critical illness, including circulatory shock and respiratory failure. According to the World Health Organization, in 2015, the under-five mortality rate in low-income countries was 76 deaths per 1000 live births – about 11 times the average rate in high-income countries (7 deaths per 1000 live births). There is limited data about the nature of the delivery of critical care in resource-limited regions. The care of critically ill children in low-resource settings is challenging, contributing factors include limitations in the existing infrastructure, lack of resources, and low numbers of appropriately trained healthcare workers. Meeting these challenges requires clinical evidence pertinent to the local settings, adequate number of well-trained personnel, quality improvement activities, and the ongoing development of preventative measures. In addition, approaches to prevent worsening critical illness in at-risk hospitalized patients are needed. We are presenting 15 state-of-the art manuscripts from international experts, from all settings, involved in the care of critically ill children in resource-limited settings. This collection of manuscripts covers topics including education, research, clinical experience and infectious diseases. We hope that we are providing a window into the future of critical care delivery for all children around the world.

The Textbook of Interdisciplinary Pediatric Palliative Care, by Drs. Joanne Wolfe, Pamela Hinds, and Barbara Sourkes, aims to inform interdisciplinary teams about palliative care of children with life-threatening illness. It addresses critical domains such as language and communication, symptoms and quality of life, and the spectrum of life-threatening illnesses in great depth. This comprehensive product takes a first-of-its-kind team approach to the unique needs of critically ill children. It shows how a collaborative, interdisciplinary care strategy benefits patients and their families. If you deal with the complex care of critically ill children, this reference provides a uniquely integrated perspective on complete and effective care. Respect interdisciplinary perspectives, and provide the most comprehensive care. Use an integrated approach to address the physical, psychological, social, and spiritual needs of children and their families. Understand and heed your strengths and vulnerabilities in order to provide the best care for your patients. Recognize the necessity of linking hospital-based palliative care with community resources. Implement consistent terminology for use by the entire palliative care team. Access the full text online with regular updates and supplemental text and image resources.
