In mei 1866 schrijft Leo Tolstoj het woord einde onder een manuscript dat generaties lezers in zijn ban zal krijgen. Aanvankelijk heet het boek Eind goed, al goed, later wordt de titel veranderd in Oorlog en vrede. Het verhaal eindigt met een dubbel huwelijk, en niet met de dood van de grote held vorst Andrej Bolkonski. Delen van het manuscript worden gepubliceerd in tijdschriften en de auteur doet verscheidene pogingen het boek gedrukt te krijgen. Pas drie jaar later zal het boek verschijnen. Deze editie is de oerversie, in de prachtige Nederlandse vertaling van Peter Zeeman en Dieuwke Papma. Deze Oorlog en vrede is ongeveer half zo lang als de gecanoniseerde versie, ontbeert de lange uitweidingen over geschiedfilosofie, bevat vele andere scènes en verwickelingen en leidt naar een geheel ander einde. Met de uitgave van deze oorspronkelijke versie

zag een nieuwe, frisse Tolstoj het licht.

A 13-point manifesto for a new financial services marketing model Anthony Thomson knows a thing or two about new and disruptive financial services, having co-founded and chaired first the ground-breaking Metro Bank and then the purely digital, app-based Atom Bank. And as a financial services marketing specialist for over 30 years, Lucian Camp has helped develop more new and innovative financial services propositions than anyone. Now they've put their heads together to write *No Small Change*, a passionate, opinionated and practical manifesto arguing that the fast-changing financial services world urgently needs to rethink the whole of its approach to marketing. Most of all, they propose that an increasingly digital, fintech-driven industry needs not just more marketing, but also better marketing to make sure it's successfully identifying consumers' real needs, and finding powerful and successful ways to engage with them. After detailing the forces of change that demand a new approach, the book then examines in 13 chapters what the key components of that new approach should look like. It takes a broad and multi-faceted perspective, exploring areas as diverse as the crisis of consumer trust, the ever-growing power of Big Data, the importance of leadership and corporate culture and the rapid advance in thinking based on Behavioural Economics. In developing these themes, the authors don't pull their punches. The book is fiercely critical of some of the industry's long-established marketing habits, providing compelling reasons why it's time to abandon the practices that have given it a bad

name. Marketers will applaud, but the book is also intended for a broader audience. Thomson and Camp challenge senior management in financial firms to appreciate the real value that marketers can bring to shaping the business agenda at the highest level, and not just to label marketing with that tired old phrase “the colouring-in department.” Rich in anecdotes, comments from leading industry figures, personal experiences on the part of both authors and findings from original research, *No Small Change* is an entertaining and rewarding read – and, at this point in the development of financial services, a timely and important one.

Since its original publication in 1999, this foundational book has become a classic in its field. This second edition, *Code Version 2.0*, updates the work and was prepared in part through a wiki, a web site allowing readers to edit the text, making this the first reader-edited revision of a popular book. *Code* counters the common belief that cyberspace cannot be controlled or censored. To the contrary, under the influence of commerce, cyberspace is becoming a highly regulable world where behavior will be much more tightly controlled than in real space. We can - we must - choose what kind of cyberspace we want and what freedoms it will guarantee. These choices are all about architecture: what kind of code will govern cyberspace, and who will control it. In this realm, code is the most significant form of law and it is up to lawyers, policymakers, and especially average citizens to decide what values that code embodies.

22nd International Conference on Application and Theory of Petri Nets, ICATPN 2001, held in Newcastle upon Tyne, UK in June 2001. The 19 revised full papers presented together with three invited papers were carefully reviewed and selected from 48 submissions. All current issues on research and development of Petri nets are addressed, in particular timed, stochastic, colored, symmetrical, and high-level Petri nets; formal verification, model checking, embedded systems, real-time systems, dependable computing, and state spaces. This LNCS double volume LNCS 9931-9932 constitutes the refereed proceedings of the 18th Asia-Pacific Conference APWeb 2016 held in Suzhou, China, in September 2016. The 79 full papers and presented together with 24 short papers and 17 demo papers were carefully reviewed and selected from 215 submissions. the focus of the conference was on following subjects: Spatio-temporal, Textual and Multimedia Data Management Social Media Data Analysis Modelling and Learning with Big Data Streaming and Real-time Data Analysis Recommendation System Data Quality and Privacy Query Optimization and Scalable Data Processing

This book constitutes selected papers from the First International Symposium on Geometry and Vision, ISGV 2021, held in Auckland, New Zealand, in January 2021. Due to the COVID-19 pandemic the conference was held in partially virtual format. The 29 papers were thoroughly reviewed and selected from 50 submissions. They cover topics in areas of digital geometry, graphics, image and video technologies, computer vision, and multimedia

Defending Assessment Security in a Digital World explores the phenomenon of e-cheating and identifies ways to bolster assessment to ensure that it is secured against threats posed by technology. Taking a multi-disciplinary approach, the book develops the concept of assessment security through research from cybersecurity, game studies, artificial intelligence and surveillance studies. Throughout, there is a rigorous examination of the ways people cheat in different contexts, and the effectiveness of different approaches at stopping cheating. This evidence informs the development of standards and metrics for assessment security, and ways that assessment design can help address e-cheating. Its new concept of assessment security both complements and challenges traditional notions of academic integrity. By focusing on proactive, principles-based approaches, the book equips educators, technologists and policymakers to address both current e-cheating as well as future threats.

From the concert stage to the dressing room, from the recording studio to the digital realm, SPIN surveys the modern musical landscape and the culture around it with authoritative reporting, provocative interviews, and a discerning critical ear. With dynamic photography, bold graphic design, and informed irreverence, the pages of SPIN pulsate with the energy of today's most innovative sounds. twintigste eeuw. Nelson Mandela beschrijft de lange weg die hij heeft moeten afleggen van onwetende jongen tot charismatisch staatsman. Dit is het verhaal van misschien wel de wonderbaarlijkste omwenteling in de geschiedenis, verteld door de man die het allemaal heeft meegemaakt en in gang gezet. Het verhaal van Mandela, door Mandela.

This collection explores the relationship between digital gaming and its cultural context by focusing on the burgeoning Asia-Pacific region. Encompassing key locations for global gaming production and consumption such as Japan, China, and South Korea, as well as increasingly significant sites including Australia and Singapore, the region provides a wealth of divergent examples of the role of gaming as a socio-cultural phenomenon. Drawing from micro ethnographic studies of specific games and gaming locales to macro political economy analyses of techno-nationalisms and trans-cultural flows, this collection provides an interdisciplinary model for thinking through the politics of gaming production, representation, and consumption in the region.

Find out how to apply learning science in online classes The concept of small teaching is simple: small and strategic changes have enormous power to improve student learning. Instructors face unique and specific challenges when teaching an online course. This book offers small teaching strategies that will positively impact the online classroom. This book outlines practical and feasible applications of theoretical principles to help your online students learn. It includes current best practices around educational technologies, strategies to build community and collaboration, and minor changes you can make in your online teaching practice, small but impactful adjustments that result in significant learning gains. • Explains how you can support

your online students • Helps your students find success in this non-traditional learning environment • Covers online and blended learning • Addresses specific challenges that online instructors face in higher education Small Teaching Online presents research-based teaching techniques from an online instructional design expert and the bestselling author of Small Teaching.

In Math for Programmers you'll explore important mathematical concepts through hands-on coding. Filled with graphics and more than 300 exercises and mini-projects, this book unlocks the door to interesting—and lucrative!—careers in some of today's hottest fields. As you tackle the basics of linear algebra, calculus, and machine learning, you'll master the key Python libraries used to turn them into real-world software applications. Summary To score a job in data science, machine learning, computer graphics, and cryptography, you need to bring strong math skills to the party. Math for Programmers teaches the math you need for these hot careers, concentrating on what you need to know as a developer. Filled with lots of helpful graphics and more than 200 exercises and mini-projects, this book unlocks the door to interesting—and lucrative!—careers in some of today's hottest programming fields. Purchase of the print book includes a free eBook in PDF, Kindle, and ePub formats from Manning Publications. About the technology Skip the mathematical jargon: This one-of-a-kind book uses Python to teach the math you need to build games, simulations, 3D graphics, and machine learning algorithms. Table of Contents

1 Learning math with code
PART I - VECTORS AND GRAPHICS
2 Drawing with 2D vectors
3 Ascending to the 3D world
4 Transforming vectors and graphics
5 Computing transformations with matrices
6 Generalizing to higher dimensions
7 Solving systems of linear equations
PART 2 - CALCULUS AND PHYSICAL SIMULATION
8 Understanding rates of change
9 Simulating moving objects
10 Working with symbolic expressions
11 Simulating force fields
12 Optimizing a physical system
13 Analyzing sound waves with a Fourier series
PART 3 - MACHINE LEARNING APPLICATIONS
14 Fitting functions to data
15 Classifying data with logistic regression
16 Training neural networks

Waldo and his colleagues address a problem typical of criminological research: attaining reliability and validity in measuring data obtained under imperfectly controlled conditions. They discuss appropriate operational definitions to use in measuring concepts, the selection of samples, items, and the data collection process -- together with the differing forms of analysis. The book is a copious source of insights into measurement challenges in the social sciences.
