This book, now back in print having been unavailable for many years, is one of the most important contributions to Turkic and Mongolic linguistics, and to the contentious 'Altaic theory'. Proponents of the theory hold that Turkish is part of the Altaic family, and that Turkish accordingly exists in parallel with Mongolic and Tungusic-Manchu. Whatever the truth of this theory, Gerard Clauson's erudite and vigorously expressed views, based as they were on a remarkable knowledge of the lexicon of the Altaic languages and his outstanding work in the field of Turkish lexicography, continues to command respect and deserve attention. "Het komt niet vaak voor dat iemand precies het moment kan aangeven waarop zijn leven naar de klote ging. Maar ik ben één van de gelukkigen, het was op 5 april om 19:23:17. De oorzaak: twee ogen." Hij woont bij jou in de buurt, in een keurig huis met een nette tuin. Hij doet zijn boodschappen bij dezelfde supermarkt als jij, en als hij per ongeluk tegen je aanbotst, verontschuldigt hij zich beleefd. Hij zegt altijd vriendelijk gedag. Doodnormaal dus. Wat je niet weet, is dat hij een geheime kelder onder zijn huis heeft gebouwd. Dat de boodschappen die in zijn kar liggen niet voor hem zijn, maar voor de vrouw die hij daar gevangen houdt. En dat zij niet de eerste is die een gruwelijk lot wacht. Zo gaat het al jaren, en hij vindt het doodnormaal. Tot hij die ene vrouw ontmoet die alles verandert... 'Hoe een lezer te manipuleren? De lezer gaat allengs sympathieke gevoelens voor hem koesteren, dat is de kracht van dit debuut van de Engelse auteur.' - NBD Biblion

1844. What makes this year so important? There are many reasons 1844 is an interesting year. The U.S. signed its first treaty with China. Samuel F.B. Morse sent his first telegraph. Charles Goodyear patented his vulcanization process, which made rubber useable in so many new ways. Oregon territory enacted a law preventing African Americans, slave or free, from entering its boundaries. A devastating flood occurred along the Missouri River and Upper Mississippi River, which contributed to the anger people felt against the new 'Mormon' population. It led to an anti-Mormon mob murdering Joseph Smith, founder of the Church of Latter-day Saints. However, these were small events for those involved in the Millerite movement. Their focus was the Second Coming of Jesus. Some anticipated it with great longing. Other's wanted to be ready, "Just in case." (Who these were became apparent after the "Great Disappointment.") Others scorned the Millerites as fools, or worse as lunatics. This puzzle book offers a new way to experience 1844. You will meet the leading characters in the Millerite movement through their own words in Cryptograms, Piece by Piece and Flip Phone Keypad Swap puzzles. You'll also learn of the world they lived in through Two In, Fill In and Word Search puzzles that have glossaries attached. There are Crossword, Keywords, Alphabet Soup, Crypto Words, Scrambled Words, Interlace, How Many Words, Dittos, Mazes and other puzzle types included. I hope you'll enjoy the journey> You're guaranteed to sharpen your brain-power along the way. This is a new way to experience 1844.

In my first cipher text titled Baptist Gnostic Christian Eubonic Kundalinion Spiritual Ki Do Hermeneutic Metaphysics, ISBN #0595206780, I discussed the Biblical science of the brazen serpent passed down through Moses in the science of the Nehushtan. In this text, I decipher several pieces of Egyptian artwork found in the Eternal Egypt exhibit. I provide this to show that I have knowledge and understanding of the Egyptian sacred priesthood knowledge. I use the symbolic language as the standard. I also give a deciphered meaning to the Egyptian art piece Stela 55001 which Egyptologists have secretly unsuccessfully been trying to decipher for over thirty years. I offer you the findings of my research and many terms that may not be in your vocabulary. Maybe "you should" look them up! The crypto wars have raged for half a century. In the 1970s, digital privacy activists prophesied the emergence of an Orwellian State, made possible by computer-mediated mass surveillance. The antidote: digital encryption. The U.S. government warned encryption would not only prevent surveillance of law-abiding citizens, but of criminals, terrorists, and foreign spies, ushering in a rival dystopian future. Both parties fought to defend the citizenry from what they believed the most perilous threats. The government tried to control encryption to preserve its surveillance capabilities; privacy activists armed citizens with cryptographic tools and challenged encryption regulations in the courts. No clear victor has emerged from the crypto wars. Governments have failed to forge a framework to govern the, at times conflicting, civil liberties of privacy and security in the digital age—an age when such liberties have an outsized influence on the citizen–State power balance. Solving this problem is more urgent than ever. Digital privacy will be one of the most important factors in how we architect twenty-first century societies—its management is paramount to our stewardship of democracy for future generations. We must elevate the quality of debate on cryptography, on how we govern security and privacy in our technology-infused world. Failure to end the crypto wars will result in societies sleepwalking into a future where the citizen–State power balance is determined by a twentieth-century status quo unfit for this century, endangering both our privacy and security. This book provides a history of the crypto wars, with the hope its chronicling sets a foundation for peace.

If you've ever made a secure purchase with your credit card over the Internet, then you have seen cryptography, or "crypto", in action. From Stephen Levy—the author who made "hackers" a household word—comes this account of a revolution that is already affecting every citizen in the twenty-first century. Crypto tells the inside story of how a group of "crypto rebels"—nerds and visionaries turned freedom fighters—teamed up with corporate interests to beat Big Brother and ensure our privacy on the Internet. Levy's history of one of the most controversial and important topics of the digital age reads like the best futuristic fiction.

'The best book on codebreaking I have read', SIR DERMOT TURING 'Brings back the joy I felt when I first read about these things as a kid', PHIL ZIMMERMANN 'This is at last the single book on codebreaking that you must have. If you are not yet addicted to

cryptography, this book will get you addicted. Read, enjoy, and test yourself on history's great still-unbroken messages!' JARED DIAMOND is the Pulitzer Prize-winning author of *Guns, Germs, and Steel*; *Collapse*; and other international bestsellers 'This is THE book about codebreaking. Very concise, very inclusive and easy to read', ED SCHEIDT 'Riveting', MIKE GODWIN 'Approachable and compelling', GLEN MIRANKER This practical guide to breaking codes and solving cryptograms by two world experts, Elonka Dunin and Klaus Schmeh, describes the most common encryption techniques along with methods to detect and break them. It fills a gap left by outdated or very basic-level books. This guide also covers many unsolved messages. The Zodiac Killer sent four encrypted messages to the police. One was solved; the other three were not. Beatrix Potter's diary and the Voynich Manuscript were both encrypted - to date, only one of the two has been deciphered. The breaking of the so-called Zimmerman Telegram during the First World War changed the course of history. Several encrypted wartime military messages remain unsolved to this day. Tens of thousands of other encrypted messages, ranging from simple notes created by children to encrypted postcards and diaries in people's attics, are known to exist. Breaking these cryptograms fascinates people all over the world, and often gives people insight into the lives of their ancestors. Geocachers, computer gamers and puzzle fans also require codebreaking skills. This is a book both for the growing number of enthusiasts obsessed with real-world mysteries, and also fans of more challenging puzzle books. Many people are obsessed with trying to solve famous crypto mysteries, including members of the Kryptos community (led by Elonka Dunin) trying to solve a decades-old cryptogram on a sculpture at the centre of CIA Headquarters; readers of the novels of Dan Brown as well as Elonka Dunin's *The Mammoth Book of Secret Code Puzzles* (UK)/*The Mammoth Book of Secret Codes and Cryptograms* (US); historians who regularly encounter encrypted documents; perplexed family members who discover an encrypted postcard or diary in an ancestor's effects; law-enforcement agents who are confronted by encrypted messages, which also happens more often than might be supposed; members of the American Cryptogram Association (ACA); geocachers (many caches involve a crypto puzzle); puzzle fans; and computer gamers (many games feature encryption puzzles). The book's focus is very much on breaking pencil-and-paper, or manual, encryption methods. Its focus is also largely on historical encryption. Although manual encryption has lost much of its importance due to computer technology, many people are still interested in deciphering messages of this kind.
