Accompanying CD-ROM includes: Adobe Acrobat file ch20rev12-24.pdf which contains review questions for chapter 20. Adobe Premiere Elements offers amateur and home moviemakers the opportunity to work with editing tools as powerful as those packed into Adobe Premiere Pro, one of the top tools on the market. Adobe Premiere Elements For Dummies offers these same users not only a guide through all the how-to steps of using the software, but also a valuable reference on how to best apply the tools to a great video project. Author Keith Underdahl, also author of Adobe Premiere Pro For Dummies, is an experienced video editor who understands what new Premiere users need to know and how to best explain the topics. In this book, Keith describes: Best practices for shooting quality video Picking the clips you want to keep and getting them into your computer How to use Premiere Elements' editing tools to add an opening credits page, transitions between clips, sound, music, and ending credits. Adding special effects using only computer trickery Putting your finished project on a DVD, videotape, or the Internet Covering more ground than the typical expanded users manuals you find in bookstores, Adobe Premiere Elements For Dummies is the book you need to get you through your first video-editing project as well as to return to whenever you hit rough spots and need instant help.

The term e-Learning is a neologism for CSCL systems that came about during the emergence of website e-learning modules. From an e-learning perspective, conventional e-learning systems were then based on instructional packets, which were delivered to students using assignments. Assignments were evaluated by the instructor. In contrast, the new e-learning places increased emphasis on social learning and use of social software such as blogs, wikis, podcasts and virtual worlds such as Second Life. This phenomenon has also been referred to as Long Tail Learning. E-learning by contrast to e-learning systems not based on CSCL, assumes that knowledge (as meaning and understanding) is socially constructed. Learning takes place through conversations about content and grounded interaction about problems and actions. Advocates of social learning claim that one of the best ways to learn something is to teach it to others. However, it should be noted that many early online courses, such as those developed by Murray Turoff and Starr Roxanne Hiltz in the 1970s and 80s at the New Jersey Institute of Technology, courses at the University of Guelph in Canada, the British Open University, and the online distance courses at the University of British Columbia (where Web CT, now incorporated into Blackboard Inc. was first developed), have always made heavy use of online discussion between students. Also, from the start, practitioners such as Harasim in 1995, have put heavy emphasis on the use of learning networks for knowledge construction, long before the term e-learning, let alone CSCL, was even considered. There is also an

increased use of virtual classrooms (online presentations delivered live) as an online learning platform and classroom for a diverse set of education providers such as Minnesota State Colleges and Universities and Sagem, MN, School District. In addition to virtual classroom environments, social networks have become an important part of e-learning. Social networks have been used to foster online learning communities around subjects as diverse as test preparation and language education. Mobile Assisted Language Learning (MALL) is a term used to describe using handheld computers or cell phones to assist in language learning. Some feel, however, that schools have not caught up with the social networking trends. Few traditional educators promote social networking unless they are communicating with their own colleagues. DLR Associates consulting group first became interested in e-learning modules at the annual Distance Learning Conference held at the University of Maine. I decided to offer e-learning services, since we were already evolved with computer-assisted education techniques. DLR Associates had been involved with CAE since computers were first used in engineering education. It was our hope a trend could be started towards blended learning services, where computer-based activities were integrated with practical or classroom-based situations. Lean Office Practices for Architects is a reference book used in the DLR Associates seminar by the same name. A student uses this book along with seminar materials to complete a three day course in Continuing Education. A CD with diagrams, figures and tables support the book when the student begins to learn what lean office practices are and how to perform the cost savings involved with this process. The technique of using a lean process in the practice of architecture is a powerful one. The use of a laptop, wireless routing and portability, on and off the job site is absolutely critical as we enter the last ninety years of this century. I would encourage you, the reader, to skip over those chapters that you have already completed in your study of lean productivity analysis. This reference book was completed after fifteen years of consulting and thirty years of teaching at Clemson University. Whenever I found a "short cut" or a lean process for architects, I put it in a large three ring notebook. This publication is the "best of the notebook."
