In the past fifty years, scholars of human development have been moving from studying change in humans within sharply defined periods, to seeing many more of these phenomenon as more profitably studied over time and in relation to other processes. The Handbook of Life-Span Development, Volume 1: Cognition, Biology, and Methods presents the study of human development conducted by the best scholars in the 21st century. Social workers, counselors and public health workers will receive coverage of of the biological and cognitive aspects of human change across the lifespan.

Concepts and Theories of Human Development is the most comprehensive and in-depth overview of the foundational theoretical contributions to understanding human development and the influence of these contributions for contemporary research and application in developmental science. Since its initial publication in 1976, it has been an essential resource for students and professionals alike, and has become the go-to book for graduate students studying for their comprehensive exam on human development. In this new Fourth Edition, Richard M. Lerner concentrates his focus on

advanced students and scholars already familiar with the basic elements of major psychological theories. The book discusses the assumptions involved in such topics as stage theories, the nature-nurture issue, the issue of continuity-discontinuity, and the important role of philosophical ideas about theories – in particular, metatheories – in understanding the links between theory and research. It particularly focuses on relational developmental systems (RDS) metatheory, exploring its roots in the 1930s, following its development into the present day, and contrasting it with the fundamentally flawed genetic reductionist models that continue to be circulated by scientists, the media, and the general public. It discusses implications of theory for research methods and for applications aimed at the promotion of health, positive development, and social justice among diverse people across the life span. Originally published in 1983, the purpose of this book was to discuss the relations between philosophy and developmental psychology, as those relations existed over the course of the history of the discipline and as they existed at that time. Although not all portions of developmental psychology are surveyed, major proponents of several key areas are represented (e.g. organismic developmental theory, stage theory, life-span-developmental psychology, and the ecological approach to development). In addition, discussion of many currently prominent

issues are included (e.g. constancy and change in human development, the use of multivariate models and methods, the role of the context in individual development, and the use of developmental theory in public policy and political arenas). The diversity of approaches and of interests present in the book are representative of the breadth of theoretical and empirical interests found in developmental psychology at the time.

Known for its clear, straightforward writing style, comprehensive coverage, strong and current research-based approach, and excellent visuals and tables, this life-span development text offers a topical organization at the chapter level and a consistent chronological presentation within each chapter. Each chapter focuses on a domain of development such as physical growth, cognition, or personality, and traces developmental trends and influences in that domain from infancy to old age.

Within each chapter, you will find sections on four life stages: infancy, childhood, adolescence, and adulthood. This unique organization enables students to comprehend the processes of transformation that occur in key areas of human development. Another staple of the text is its emphasis on theories and how they apply to specific topics in each chapter. This new edition also asks students to engage more actively with the content, and includes a clear focus on the complex

Presents an overview of the latest information on various topics in psychology, such as cognition, motivation, learning, memory, and abnormal psychology.

Everything you always wanted to know about theories, meta-theories, methods, and interventions but didn't realize you needed to ask. This innovative textbook takes advanced undergraduate and graduate students "behind the curtain" of standard developmental science, so they can begin to appreciate the generative value and methodological challenges of a lifespan developmental systems perspective. It envisions applied developmental science as focused on ways to use knowledge about human development to help solve societal problems in real-life contexts, and considers applied developmental research to be purpose driven, field based, community engaged, and oriented toward efforts to optimize development. Based on the authors' more than 25 years of teaching, this text is designed to help researchers and their students intentionally create a cooperative learning community, full of arguments, doubts, and insights, that can facilitate their own internal paradigm shifts, one student at a time. With the aid of extensive online supplementary materials, students of developmental psychology as well as students in other psychological subdisciplines (such as industrial-organizational, social, and community psychology)

With skill and enthusiasm, respected authors and noted researchers Robert V. Kail and John C. Cavanaugh tell a comprehensive and engaging story of life in HUMAN DEVELOPMENT: A LIFESPAN VIEW, SECOND EDITION. Experts in child development and adulthood and aging, respectively, Kail and Cavanaugh relate the fascinating story of the human lifespan. Their streamlined approach eliminates the redundancy of describing the lifespan via the traditional organizational structure used by many texts for the course. Instead, Kail and Cavanaugh employ a four-part structure that covers early childhood, the school years, the working/raising children years, and later life. This accurate and lively depiction of the developmental process helps students make better sense of our most intriguing and intricate journey. . .life. Providing full coverage of child and adult development within a modified chronological framework, Kail and Cavanaugh help students make the connections between chapters by emphasizing the dynamic interplay of biological, psychological, and social forces on development. This integrated biopsychosocial approach not only address the needs of many instructors, but also helps students understand how each element of development impacts the others. And unlike other lifespan texts which devote 40% or less of their coverage to adulthood and aging, HUMAN DEVELOPMENT: A LIFESPAN VIEW devotes as much coverage to adulthood and aging as to childhood and adolescence-all in 15 manageable chapters.

This streamlined, readable account of human development gives you the conceptual foundations that enable you to become an educated and critical interpreter of developmental information. ESSENTIALS OF HUMAN DEVELOPMENT: A LIFE-SPAN VIEW also offers an introduction to relevant

with an introduction to social and personality development as well as an overview of developmental science in general—its history and theory, the cultural orientation to thinking about human development, and the manner in which empirical research is designed, conducted, and analyzed. Part 2 examines personality and social development within the context of the various relationships and situations in which developing individuals function and by which they are shaped. The book concludes with an engaging look at applied developmental psychology in action through a current examination of children and the law. Ways in which developmental thinking and research affect and are affected by practice and social policy are emphasized. Intended for advanced undergraduate and/or graduate level courses on social and personality development taught in departments of psychology, human development, and education, researchers in these areas will also appreciate this book's cutting-edge coverage.

This volume continues the tradition of the Life-Span Development Series, presenting overviews of research programs on a variety of developmental topics. Research and theory in life-span development have given increased attention to the issues of constancy and change in human development and to the opportunities for, and constraints on, plasticity in structure and function across life. Acknowledging the need for and existence of interconnection between age and developmental periods, it focuses on conditions for

possibly discontinuous development that emerge at later periods. Contributors to this series are sensitive to the restrictive consequences of studying only specific age periods, such as old age, infancy, or adolescence. Each scholar attempts to relate the facts about one age group to similar facts about other age groups, and to move toward the study of transformation of characteristics and processes over the life span.
