Most of us understand the benefits of getting a good education. Not only can it open doors to university and better job prospects, but can help to broaden an individual's outlook on life. For some people, however, getting the right qualifications can be a real challenge, especially if they aren't in mainstream education. It's no wonder then that an increasing number of people are turning to distance learning, or home education, as their preferred way of passing exams. This book focuses on GCSEs and A-Levels: the main school-leaving qualifications that are universally recognised in the UK. It explains the main features of the qualifications, how to study them, and how to take the exams involved. This book is intended to be used as a guide for prospective students who might want to undertake this form of learning, but have some difficulty in working out where to start.

Sir Arthur Conan Doyle (1859 - 1930) was historicus, atleet, spiritist, oorlogscorrespondent maar bovenal schrijver. Doyle schiep met Sherlock Holmes het karakter van de beroemdste en meest vernuftige detective aller tijden. De spanning, de intriges en de vaart waarmee de verhalen worden verteld, hebben niets aan zeggingskracht ingeboet. Het vierde deel in de Sherlock Holmes-serie bevat onder andere de verhalen Het teken van de vier, Het mysterie van het Boscombedal en Het avontuur van de kartonnen doos.

Our Revision Workbooks help students develop vital skills throughout their course in preparation for the exam with:

The practice papers in the book are carefully modelled after past papers and specifications of exam board to ensure that the papers as a whole provide a rich and varied practice to meet all requirements of IGCSE mathematics with an appropriate difficulty. Solutions are easy and comprehensible by people of all skill levels. They offer students ways of dealing with common problems but also more complex questions that students may struggle with under examination pressure. The solutions have been reviewed by many students of varying skill, to ensure that they are easily understandable while being the fastest and most re-applicable.

This book focuses on the delivery of public examinations offered by the main examining boards in England since Victorian England. The investigation reveals that the provision of examinations was as controversial in the nineteenth century as it is today, particularly since the government is now determined to bring in reform. The issues of grade inflation, the place of coursework in marking, and the introduction of technological change all feature in this book. Educational policy is primarily examined as well as some reference to the global scene. The study analyses archival material from a wide range of sources, including those records stored at the National Archives and the London Metropolitan Archives. An emphasis is placed upon the various institutions that contributed to the process, including the Royal Society of Arts, the London Chamber of Commerce, the City of Guilds of London Institute and the University of London. Attention is given to the findings of the Taunton Commission and the Bryce Commission and shorter reports such as the Northcote-Trevelyn Report which served to radicalise entry and recruitment to the Civil Service. The modern GCSE and the plans for I-levels are considered and key observations are made about the efficacy of those examinations offered by Oxford and Cambridge universities and O-levels, A-levels and NVQs, The reader is given every opportunity to benefit enthusiastically in this account of examinations, and those engaged in education, whether teachers, examiners, students or administrators, will be able to gain useful insights into the workings of the examination system.

The phenomenon of consumption has increasingly drawn attention from economists. While the 'sole purpose of production is consumption', as Adam Smith has claimed, economists have up to recently generally ignored the topic. This book brings together a range of different perspectives on the topic of consumption that will finally shed the necessary light on a largely neglected theme, such as Why is the consumption of symbolic goods different than that of goods that are not constitutive of individuals' identity? How does the consumption of symbolic goods affect social processes and economic phenomena? Will taking consumption (of symbolic goods) seriously impact economics itself? The book discusses these issues theoretically, and, through analyses of such cases as food, religion, fashion, empirically as well. It also discusses the possible role in the future of consumption. This book was previously published as a special issue of Review of Social Economy
