This book is about resistance in everyday life, illustrated through empirical contexts from different parts of the world. Resistance is a widespread phenomenon in biological, social and psychological domains of human cultural development. Yet, it is not well articulated in the academic literature and, when it is, resistance is most often considered counter-productive. Simple evaluations of resistance as positive or negative are avoided in this volume; instead it is conceptualised as a vital process for human development and well-being. While resistance is usually treated as an extraordinary occurrence, the focus here is on everyday resistance as an intentional process where new meaning constructions emerge in thinking, feeling, acting or simply living with others. Resistance is thus conceived as a meaning-making activity that operates at the intersection of personal and collective systems. The contributors deal with strategies for handling dissent by individuals or groups, specifically dissent through resistance. Resistance can be a location of intense personal, interpersonal and cultural negotiation, and that is the primary reason for interest in this phenomenon. Ordinary life events contain innumerable instances of agency and resistance. This volume discusses their

manifestations, and it is therefore of interest for academics and researchers of cultural psychology, cultural studies, anthropology, sociology, and human development. This text is the first to provide a contextual understanding of the clinical issues that affect men and masculinity across a wide range of cultural and national settings. It demonstrates that gender can no longer be viewed as an isolated characteristic; in an era of increased globalization, mental health professionals need to take ethnic and cultural issues into account to provide adequate care for male patients. Numerous international perspectives are offered by the contributing authors, authorities from countries such as Australia, Argentina, Denmark, Canada, India, Ireland, and South Africa, on theoretical and clinical innovations for working with men. Their chapters also offer insight into the socio-cultural contexts for counseling men in and from their respective countries by exploring the ways in which "being a man" is socially defined, what unique challenges men face, and how these challenges can be negotiated within their specific cultural settings. Topics addressed will include boyhood notions of manhood, relationship concerns and power, fatherhood, and men's body image across the life span. This text will ultimately enable mental health practitioners to have a better understanding of how to work more effectively with male clients.

This book presents World War II and the American Occupation of Japan as experienced in Oita Prefecture through first-hand accounts of 40 Japanese men and women who lived through the war as students, midwives, nurses, teachers, journalists,

soldiers, sailors, Kamikaze pilots, munitions factory workers, and housewives. Their stories of spirited support for the war, to loss of friends from American air raids, to hunger and fear of American occupiers are supplemented by local archives and newspaper reports from those years. Archival findings highlight the rarely chronicled training exercises for the attack on Pearl Harbor headquartered in Oita, the final Kamikaze attack against U.S. forces departing from Oita hours after the war ended, and the striking fact that the two Japanese representatives signing the surrender on the Battleship Missouri hailed from Oita. The book ends with the American Occupation forces and their interaction with the Japanese.

This book provides a comprehensive overview of research methods in the behavioral sciences, focusing primarily on the conceptual issues inherent in conducting research. It covers topics that are often omitted from other texts, including measurement issues, correlational research, qualitative research, and integrative literature reviews. The book also includes discussions of diversity issues as they related to behavioral science research. New to this edition are chapter boxes that focus on applied issues related to each chapter topic. Throughout the book, readable examples and informative tables and figures are provided. The authors also take a contemporary approach to topics such as research ethics, replication research, and data collection (including internet research).

Since its original publication, *Expert Political Judgment* by New York Times bestselling author Philip Tetlock has established itself as a contemporary classic in the literature on evaluating expert opinion. Tetlock first discusses arguments about whether the world is too complex for people to find the tools to understand political phenomena, let alone predict the future. He evaluates predictions from experts in different fields, comparing them to predictions by well-informed laity or those based on simple extrapolation from current trends. He goes on to analyze which styles of thinking are more successful in forecasting. Classifying thinking styles using Isaiah Berlin's prototypes of the fox and the hedgehog, Tetlock contends that the fox--the thinker who knows many little things, draws from an eclectic array of traditions, and is better able to improvise in response to changing events--is more successful in predicting the future than the hedgehog, who knows one big thing, toils devotedly within one tradition, and imposes formulaic solutions on ill-defined problems. He notes a perversely inverse relationship between the best scientific indicators of good judgement and the qualities that the media most prizes in pundits--the single-minded determination required to prevail in ideological combat. Clearly written and impeccably researched, the book fills a huge void in the literature on evaluating expert opinion. It will appeal across many academic disciplines as well as to corporations seeking to develop standards for judging expert decision-making. Now with a new preface in which Tetlock discusses the latest research in the field, the book explores what constitutes good judgment in predicting future events and looks at why experts are often wrong in their forecasts.

comprehensive introduction to the field of relationship science. Designed as a supplement in courses on the psychology of women, the psychology of gender, and gender-role development, this collection of short, accessible lectures, written by experienced and committed teachers, spotlights topics that often receive less in-depth coverage in core textbooks. While topically arranged to align with standard texts, each favorite lecture stands alone: essentially instructors can assign the readings to meet their own course needs. Among the student-friendly features are the informal writing styles, with each author speaking directly to the reader; questions and ideas that encourage critical thinking; and biographical statements and photographs that introduce each contributor. The authors represent a variety of personal backgrounds and experiences, but they believe in the importance of gender equality. To that point, the book addresses common feminist themes, including the social construction of gender, power, the value of diversity, inclusive language, the global status of women, and the value of social activism.

Understanding People provides an overview and critique of current psychological assumptions about people and what differentiates them, and replaces them with a set of ideas taken from social constructionism. It begins with an examination of contemporary theories, then explores the critique of the social constructionists, before laying out the basis of an understanding of human action and behaviour, drawing on

phenomenology and personal construct theory. Using everyday experience to illustrate the issues in personality theory (Is behaviour situation-specific? Why do we have a sense of self? Is there an unconscious?), this book will breathe life into an area of psychology that is so often arid, and, in the eyes of students, divorced from their world. In the past four decades or so, the so-called psychology of religion – after having been deemed extinct, impossible or unlikely – has risen to prominence again: the number of publications is rapidly growing, an impressive secondary literature (handbooks, introductions, etc.) is available already, infrastructure has been developed (a number of new journals devoted to the subject have been founded, organizations have been established, increasingly funding is going to the area), attracting many new researchers. Organizations like the American Psychological Association are now publishing in the field of psychology of religion (and its Div. 36 [“psych of rel”] with almost 3,000 members is already mid-sized among the APA-divisions). This book documents this re-emergence and development.

Psychology, Religion, and Spirituality provides readers with a critical overview of what psychology tells us about religion and spirituality. It is concise without being simplistic, and the first such broad overview to be published for some years. Fraser Watts recognizes that 'religion' is complex and multi-faceted, taking different forms in different people and contexts. The book presents a broad view of psychology; whatever kind of psychology you are interested in, you will find it covered here, from biological to social, and from experimental to psychoanalytic. It focuses particularly on the varied concepts that psychologists have employed to make sense of religion and subjects them to critical examination. The book is also concerned with practical applications, helping those engaged in religious ministry. It will be of interest to undergraduates and general readers, as well as specialists in religious studies, psychology, and philosophy of religion.
