Robotics is undergoing a major transformation in scope and dimension. From a largely dominant industrial focus, robotics is rapidly expanding into human environments and vigorously engaged in its new challenges. Interacting with, assisting, serving, and exploring with humans, the emerging robots will increasingly touch people and their lives.

Beyond its impact on physical robots, the body of knowledge robotics has produced is revealing a much wider range of applications reaching across diverse research areas and scientific disciplines, such as: biomechanics, haptics, neurosciences, virtual simulation, animation, surgery, and sensor networks among others. In return, the challenges of the new emerging areas are proving an abundant source of stimulation and insights for the field of robotics. It is indeed at the intersection of disciplines that the most striking advances happen. The Springer Tracts in Advanced Robotics (STAR) is devoted to bringing to the research community the latest advances in the robotics field on the basis of their significance and quality. Through a wide and timely dissemination of critical research developments in robotics, our objective with this series is to promote more exchanges and collaborations among the researchers in the community and contribute to further advancements in this rapidly growing field.

Les parades nuptiales des baleines à bosse, le ballet maladroit des pachydermes dans l'Océan ou le mystère d'une cérémonie bwiti, la singularité de l'architecture portugaise métissée dans les îles du milieu du monde, la nonchalance d'une population se mouvant au rythme du « levé, levé », les plages dorées à perte de vue ou la beauté des fonds marins transcendent celui qui osera vivre et voir ce patrimoine universel, encore intact, du berceau de l'humanité. Le Gabon et son voisin l'archipel de Sao Tomé, deux entités à la fois si proche et si différentes, complètent un tableau de l'histoire de l'Afrique dans toute sa splendeur, que le Petit Futé se propose d'être le premier à dévoiler.
