This volume gathers the papers presented at three workshops that are embedded in the IFIP/Sec Conference in 2004, to enlighten specific topics that are currently particularly active in Security. The first one is the 10th IFIP Annual Working Conference on Information Security Management. It is organized by the IFIP WG 11. 1, which is itself dedicated to Information Security Management, i. e. , not only to the practical implementation of new security technology issued from recent research and development, but also and mostly to the improvement of security practice in all organizations, from multinational corporations to small enterprises. Methods and techniques are developed to increase personal awareness and education in security, analyze and manage risks, identify security policies, evaluate and certify products, processes and systems. Matt Warren, from Deakin University, Australia, who is the current Chair of WG 11. 1, acted as the Program Chair. Security Culture starts from the premise that, even with good technical tools and security processes, an organisation is still vulnerable without a strong culture and a resilient set of behaviours in relation to people risk. Hilary Walton combines her research and her unique work portfolio to provide proven security culture strategies with practical advice on their implementation. And she does so across the board: from management buy-in, employee development and motivation, right through to effective metrics for security culture activities. There is still relatively little integrated and structured advice on how you can embed security in the culture of your organisation. Hilary Walton draws all the best ideas together, including a blend of psychology, risk and security, to offer a security culture interventions toolkit from which you can pick and choose as you design your security culture programme - whether in private or public settings. Applying the techniques included in **Security Culture** will enable you to introduce or enhance a culture in which security messages stick, employees comply with policies, security complacency is challenged, and managers and employees understand the significance of this critically important, business-as-usual, function.

Knowledge Architectures reviews traditional approaches to managing information and explains why they need to adapt to support

21st-century information management and discovery. Exploring the rapidly changing environment in which information is being managed and accessed, the book considers how to use knowledge architectures, the basic structures and designs that underlie all of the parts of an effective information system, to best advantage. Drawing on 40 years of work with a variety of organizations, Bedford explains that failure to understand the structure behind any given system can be the difference between an effective solution and a significant and costly failure. Demonstrating that the information user environment has shifted significantly in the past 20 years, the book explains that end users now expect designs and behaviors that are much closer to the way they think, work, and act. Acknowledging how important it is that those responsible for developing an information or knowledge management system understand knowledge structures, the book goes beyond a traditional library science perspective and uses case studies to help translate the abstract and theoretical to the practical and concrete. Explaining the structures in a simple and intuitive way and providing examples that clearly illustrate the challenges faced by a range of different organizations, Knowledge Architectures is essential reading for those studying and working in library and information science, data science, systems development, database design, and search system architecture and engineering.

"This 10-volume compilation of authoritative, research-based articles contributed by thousands of researchers and experts from all over the world emphasized modern issues and the presentation of potential opportunities, prospective solutions, and future directions in the field of information science and technology"--Provided by publisher.
