This book explores the relationship between and the compatibility of lean management (LM) and value-based management (VBM) approaches at the systems level. It then develops a model to improve LM and VBM professional practice by fostering a shared understanding of the value creation process within a lean system, and in doing so helps to remove existing barriers. The results promote future fruitful alliances between a company's operational and financial communities, enhancing the benefits to the enterprise and its stakeholders. The book is of primary interest to LM and VBM professionals and researchers.

Behavioural research is well established in the social sciences, and has flourished in the field of accounting in recent decades. This far-reaching and reliable collection provides a definitive resource on current knowledge in this new approach, as well as providing a guide to the development and implementation of a Behavioural Accounting Research project. The Routledge Companion to Behavioural Accounting Research covers a full range of theoretical, methodological and statistical approaches relied upon by behavioural accounting researchers, giving the reader a good grounding in both theoretical perspectives and practical applications. The perspectives cover a range of countries and contexts, bringing in seminal chapters by an international selection of behavioural accounting scholars, including Robert Libby and William R. Kinney, Jr. This book is a vital introduction for Ph.D. students as well as a valuable resource for established behavioural accounting researchers.

Heuristics are short-cuts and deliberately ignore information, for instance through examining fewer cues or integrating less information. However, this collides with a view on management accountants and controllers as rational agents which seems to suggest that all available information should be considered. As their role as information supplier is often accompanied with the task to assist managers in their judgment and decision making, they have huge influence on these processes. Therefore, it is of high relevance to know if, how, and which heuristics management accountants and controllers use. Furthermore, we need to know which individual and situational factors influence their usage of heuristics. With a series of five empirical studies, applying a mixed-methods research design, the author sheds light to these research questions and addresses some central claims of the potential biases but also the stunning benefits of relying on heuristic reasoning. Central to his discussion are dual-process-approaches which are debated in cognitive psychology. Scholars of these approaches claim that we should distinguish between two distinct processes (or systems) of the human mind. Following this interpretation, heuristics are processes which are described as intuitive, automatic, fast, and unconscious. They are routinized cognitive processes which are based on experience in certain social environments and thus often exhibit ecological rationality. Overall, this book picks up an up-to-date topic in behavioural accounting research, which not only is of relevance for researchers but as well for practitioners.

Planning is central to economic, social and environmental life but its practice is frequently criticised by all who engage in it. Seen as too restrictive by those who promote development and too weak by those opposing it, planners who advise on proposals cannot sit on the fence. Is it the planning system that is problematic or is it the planners who work within it? This valuable book examines these issues at the continuing professional development level and discusses the ways in which management theories, tools and techniques can be applied to planning practice and used by all who engage in it. Written by an experienced author and widely respected academic, the book includes case studies and question and answer sections, and will be valuable through both initial and continuous professional education, helping candidates prepare for examinations and subsequent management.

This book explores two combined approaches (strategy and accounting) from a cross-disciplinary perspective in order to improve knowledge of value creation in various contexts. Existing studies on this topic have generally adopted a purely account-based or strategy-oriented approach to address this issue. However, this book draws upon a number of well-defined theoretical and empirical backgrounds and methodologies. Since the 1980s, many changes have occurred and companies have increasingly focused their strategies on value creation. Consequently, new strategic directions have emerged, especially for managerial accounting. Management accounting and alignment with strategy could thus improve performance. This book encourages further thought and reflection on these issues which should be pursued in the future as firms face new challenges associated with the acceleration of digital transformation.
