A world list of books in the English language.

This acoustics handbook for mechanical and architectural applications is a translation of the German standard work on the subject. It not only describes the state of art of engineering acoustics but also gives practical help to engineers for solving acoustic problems. It deals with the origin, the transmission and the methods of abatement of air-borne and structure-borne sound of different kinds, from traffic to machinery and flow induced sound.

The next generation of Business Process Management (BPM) methods and tools will support the development of a new generation of service-enabled applications that change and evolve over time. The trend is moving from relatively stable, organization-specific applications to dynamic ones supporting business processes. This book is an outcome of the International Workshop on Business System Management and Engineering (BSME 2010), held in Malaga, Spain, in June/July 2010, in conjunction with the TOOLS 2010 federated conferences and under the aegis of the EU Network of Excellence on Service Software and Systems (S-Cube). The goal of the workshop was to bring together experts in the fields of business process management, service-oriented architectures, and service security to discuss the current state of research and identify new issues, challenges, and research directions. The results of these discussions are reflected in this book.

Edited by and with an introduction from Charles Wyplosz, this book brings

together some of the key international people in the field of monetary policy, central banking and exchange rate regimes to discuss contemporary international monetary issues.

Het nieuwe boek van bestsellerauteur Ha-Joon Chang is een bijzonder onderhoudende en toegankelijke introductie in de wereld van de economie. Wat is economie? Wat doen economen? Waarom zijn economen zulke slechte voorspellers? Chang biedt niet alleen de handvatten voor een beter begrip van de financiële wereld, maar geeft ook zijn visie op wat de economie voor iedereen kan betekenen, en dus niet alleen voor superrijken. Economie is onontbeerlijk voor het begrijpen van de krachten die bepalen hoe mensen, naties en economische systemen functioneren. En het laat helder zien hoe we de huidige economische ramspoed moeten begrijpen, en wat we eraan kunnen doen.

Can traditional arts improve an older adult's quality of life? Are arts interventions more effective when they align with an elder's cultural identity? In The Expressive Lives of Elders, Jon Kay and contributors from a diverse range of public institutions argue that such mediations work best when they are culturally, socially, and personally relevant to the participants. From quilting and canning to

weaving and woodworking, this book explores the role of traditional arts and folklore in the lives of older adults in the United States, highlighting the critical importance of ethnographic studies of creative aging for both understanding the expressive lives of elders and for designing effective arts therapies and programs. Each case study in this volume demonstrates how folklore and traditional practices help elders maintain their health and wellness, providing a road map for initiatives to improve the lives and well-being of America's aging population.

S-Cube's Foundations for the Internet of Services Today's Internet is standing at a crossroads. The Internet has evolved from a source of information to a critical infrastructure which underpins our lives and economies. The demand for more multimedia content, more interconnected devices, more users, a richer user experience, services available any time and anywhere increases the pressure on existing networks and service platforms. The Internet needs a fundamental rearrangement to be ready to meet future needs. One of the areas of research for the Future Internet is the Internet of Services, a vision of the Internet where everything (e. g. , information, software, platforms and infrastructures) is available as a service. Services available on the Internet of Services can be used by anyone (if they are used according to the policies defined by the provider) and

they can be extended with new services by anyone. Advantages of the Internet of Services include the possibility to build upon other people's efforts and the little investment needed upfront to develop an application. The risk involved in pursuing new business ideas is diminished, and might lead to more innovative ideas being tried out in practice. It will lead to the appearance of new companies that are able to operate in niche areas, providing services to other companies that will be able to focus on their core business.

Kritische analyse van vrijemarktdenken Er zijn misschien wat nadelen aan verbonden, maar er is eigenlijk geen alternatief voor de vrijemarkteconomie. We worden er toch ook allemaal beter van? Fout. Ha-Joon Chang, een van de meest gerespecteerde economen ter wereld, maakt in dit boek korte metten met de

grootste mythes over de economie in het algemeen en het vrijemarktdenken in het bijzonder. Niet iedereen wordt rijker van marktwerking, duurbetaalde managers leveren niet per se betere prestaties en we leven niet in een postindustriële economie. Chang weet elk idee dat wij over economie hebben op zn kop te zetten. 23 dingen die ze je niet vertellen over het kapitalisme, boordevol informatie over geld, gelijkheid, vrijheid en hebzucht, laat zien dat de vrije markt veel verliezers kent en vaak leidt tot een inefficiënte manier van economie bedrijven. In dit prikkelende boek legt de auteur, die in de traditie staat van John Kenneth Galbraith and Joseph Stiglitz, uit hoe de economie echt werkt en waarom verstandig overheidsbeleid meestal tot betere resultaten leidt dan pure marktwerking.
