Out of 238 million American adults, 100 million live in chronic pain. And yet the press has paid more attention to the abuses of pain medications than the astoundingly widespread condition they are intended to treat. Ethically, the failure to manage pain better is tantamount to torture. When chronic pain is inadequately treated, it undermines the body and

mind. Indeed, the risk of suicide for people in chronic pain is twice that of other people. Far more than just a symptom, writes author Judy Foreman, chronic pain can be a disease in its own right -- the biggest health problem facing America today. Published in partnership with the International Association for the Study of Pain, *A Nation in Pain* offers a sweeping, deeply researched account of the chronic pain crisis, from neurobiology to public policy, and presents to practical solutions that are within our grasp today. Drawing on both her personal experience with chronic pain and her background as an award-winning health journalist, she guides us through recent scientific discoveries, including genetic susceptibility to pain; gender disparities in pain conditions and treatments, perhaps linked to estrogen; the problem of undertreated pain in children; the emerging role of the immune system in pain; advances in traditional treatments such as surgery and drugs; and fair-minded assessments of the effectiveness of alternative remedies, including marijuana, acupuncture, massage, and chiropractic care. For many people, the real magic bullet, Foreman writes, is exercise. Though many patients fear it will increase their discomfort, studies show it consistently produces improvement, often dramatic. She also explores the destructive "opioid wars," which have led to a misguided demonization of prescription painkillers. Foreman presents a far-reaching but sensible plan of action, ranging from enhancing pain education in medical schools to reforms of federal policies across the board. For doctors, scientists, policy makers, and especially patients, *A Nation in Pain* is essential reading.

Tens of millions of people around the world live with chronic pain - many in such severe pain they are disabled by it. The Institute of Medicine estimates that chronic pain costs the U.S. alone \$560 to \$635 billion a year in direct medical costs

and lost productivity. Morphine, an effective painkiller, costs only three cents a dose, yet because of excessive regulation in many countries, it is unavailable to millions of people who need it, even at the end of life. The World Health Organization notes that in addition to the one million end-stage AIDS/HIV patients who can't get morphine and other controlled medications, 5.5 million terminal cancer patients, nearly a million people suffering from accidents or violence, and an incalculable number of people living with chronic illnesses or recovering from surgery don't have access to it, either. Furthermore, women, children, older people, and the poor are disproportionately affected by inadequate pain relief. Physicians know almost nothing about chronic pain, much less how to treat it, for two reasons: medical schools barely teach it and government institutions allot almost nothing to the pain research budget. In *The Global Pain Crisis: What Everyone Needs to Know*®, renowned health journalist Judy Foreman addresses the most important questions about chronic pain: what is it, whom does it affect most, which pain relief methods in Western and alternative medicine are effective, what are the risks and benefits for opioids and marijuana, and how can the chronic pain crisis be resolved for good? Foreman's book is a wake-up call for a health problem that affects people across the globe, from all walks of life. Written in the classic, easy-to-read and quick reference style of the *What Everyone Needs to Know*® series, *The Global Pain Crisis* is a must-read for anyone whose life or work is affected by chronic pain.

Linking existing knowledge to new knowledge by presenting it in the form of a case or a problem is a popular and effective educational approach resulting in better retention of the knowledge and improved ability to apply that knowledge to solve real problems. This problem-based learning (PBL) method was introduced into medical education at McMaster University in Ontario, Canada, in 1969. Since then it has been widely incorporated into secondary, undergraduate, and graduate education in a variety of disciplines worldwide. This new volume for the Anesthesiology Problem-Based

Learning series reviews pediatric anesthesia utilizing the PBL approach. Each chapter deals with conditions and problems in pediatric anesthesia practice presented as a case stem with questions to encourage critical thinking, followed by an evidence-based discussion and multiple-choice questions for self-assessment. Cases were carefully selected to present a broad systems-based tour of commonly encountered clinical cases in pediatric anesthesia. The book can be used to review an upcoming clinical case or as a PBL tool. The 'Stem Case and Key Questions' and 'Discussion' sections can serve as the basis for interactive learning experiences for study groups or as a broad yet in-depth clinical review of the subspecialty for the individual learner. Self-assessment questions can be used as a measure of knowledge acquisition or simply as a question bank to prepare for examinations.

Pediatrics Morning Report: Beyond the Pearls is a case-based reference that covers the key material included on the USMLE Step 2 and Step 3, as well as the pediatric clerkship. Each case has been carefully chosen and covers scenarios and questions frequently encountered on the Pediatrics boards, shelf exams, and clinical practice, integrating both basic science and clinical pearls. "Beyond the Pearls" tips and secrets (all evidence-based with references) provide deep coverage of core material. "Morning Report"/"Grand Rounds" format begins with the chief complaints to the labs, relevant images, and includes a "pearl" at the end of the case. Questions are placed throughout the case to mimic practical decision making both in the hospital and on the board exam. Written and edited by experienced teachers and clinicians; each case has been reviewed by board certified attending/practicing physicians.
