Singapore's best homegrown car magazine, with an editorial dream team driving it. We fuel the need for speed!

BMW is a company associated with motoring firsts. The very idea of a sports sedan was merely a novelty until BMW introduced the 5 series in 1972. As BMW's "middle child," the 5 series has drawn features from the company's smallest and largest models, establishing a reputation for performance and practicality through multiple generations. This book covers the history of the 5 series midsize sedan and the related X5 SUV from September 1972 to the e60's major makeover for 2008 and the development of the e70 X5. Specific mechanical, electronic and cosmetic changes are described, including the time of and reasons for their introduction. Several aspects of BMW's corporate history and technically related models such as the 6-series are also described, as are aftermarket modifications by Alpina, Hartge, and other specialist BMW tuners and speed shops. The book includes more than 200 photographs. De Kampioen is the magazine of The Royal Dutch Touring Club ANWB in The Netherlands. It's published 10 times a year with a circulation of approximately 3,5 million copies.

Ukraine Investment and Business Guide Volume 1 Strategic and Practical Information

In spite of all the assistance offered by electronic control systems, the latest generation of passenger car chassis still relies on conventional chassis elements. With a view towards driving dynamics, this book examines these conventional elements and their interaction with mechatronic systems. First, it describes the fundamentals and design of the chassis and goes on to examine driving dynamics with a particularly practical focus. This is followed by a detailed description and explanation of the modern components. A separate section is devoted to the axles and processes for axle development. With its revised illustrations and several updates in the text and list of references, this new edition already includes a number of improvements over the first edition.

Return on Ideas is a practical guide to getting more from the resources you put into your innovation process. David Nichols clearly shows why current innovation funnel models stifle rather than encourage new ideas, and offers a new methodology, 'rocketing', to tackle the problem. The first book to look in detail at innovation as a business-driving imperative, Return on Ideas provides the tools, techniques and processes to actually upgrade the way you tackle innovation, illustrated with examples from innovative companies such as Yo! Sushi, Apple, Vodafone, Unilever, P&G, Danone, Amex and Ben & Jerry's – as well as unconventional sources such as theatre and comedy.

Exploring the concept of win-win agreements, this book analyses how they pose an important challenge for entrepreneurs, managers and advisors involved in complex negotiations among firms. Providing an overview and discussion of existing literature, the author further develops a theoretical framework for analysing corporate negotiations, and illustrates how this can be implemented in real-life situations. This book presents an empirical case study from the automotive industry and analyses the negotiation between Fiat Chrysler in 2009, offering practical strategies for those involved in corporate negotiations. Presenting how win-win agreements can improve competitive advantage, this book will be an invaluable read for practitioners and scholars alike.

Volume 2 of the two-volume set Advanced direct injection combustion engine technologies and development investigates diesel DI combustion engines, which despite their commercial success are facing ever more stringent emission legislation worldwide. Direct injection diesel engines are generally more efficient and cleaner than indirect injection engines and as fuel prices continue to rise DI engines are expected to gain in popularity for automotive applications. Two exclusive sections examine light-duty and heavy-duty diesel engines. Fuel injection systems and after treatment systems for DI diesel engines are discussed. The final section addresses exhaust emission control strategies, including combustion diagnostics and modelling, drawing on reputable diesel combustion system research and development.
