In a fast changing world, brimming with social and economic uncertainty, financial information plays a vital role in the life of an organization and does so with two sets of eyes. One set looks back to see what has happened. This is the accounting function, which is simply about the recording of events and the production of the financial reports that satisfy the stewardship responsibility of management. The other set looks forward to determine the most appropriate strategic direction for an organization, guiding managerial actions, motivating behaviors, and creating and supporting the cultural values necessary to achieve an organizations strategic objectives. This book is all about the second set of eyes, which are the lenses of STRATEGIC FINANCIAL MANAGEMENT, that help organizations plot their way through an environment filled with opportunities and dangers. For students, aspiring managers as well as those who already have management responsibilities this book provides an insight, through the eyes of the characters of a start-up company, of some of the ideas and models that help to identify the possible strategies capable of maximizing an organization's value, which is the same as making the owners as wealthy as possible, to determine how to finance the organization in the most proper way, to allocate the collected capital in the most effective way, to monitor the implementation of the chosen strategy to see whether it is meeting the planned objectives, and to reasonably decide on the reinvestment and distribution of profits.

Seminar paper from the year 2007 in the subject Business economics - Miscellaneous, grade: A, University of Bradford (School of Management), course: Strategic Financial Management, 29 entries in the bibliography, language: English, abstract: The valuation of a company is fundamental for financial and strategic decision making. One of the first structured approaches to assess the value of a company was the so-called Shareholder Value Analysis developed by Rappaport (1986). He identified value drivers in three different areas, namely Finance, Investment and Business. The theory says that improvement of these value drivers leads directly to an increase in shareholder value (Spencer and Francis 1998). In this assignment, the company to be evaluated, namely adidas, will be presented and then analysed concerning the value delivery in recent years. After that, different methods of company valuation will be explained and applied to adidas. The assignment will finish with a critical appraisal of the findings.

The comprehensive solutions manual includes answers to all end of chapter questions and problems. Many of the solutions are illustrated to help the student better understand the process involved with solving the problem. All of these illustrations can be used as PowerPoint slides.

Entrepreneurial finance is a discipline that studies financial resource mobilization, resource allocation, risk moderation, optimization in financial contracting, value creation, and value monetization within the context of entrepreneurship. However, without proper strategic consideration the discipline is incomplete. This book examines how the activity of entrepreneurial finance can be enhanced via a concentration on value creation and through improved strategic decision-making. The most unique feature of the book is its focus on value creation. For entrepreneurs, value creation is not a one-off activity, but rather a continuous cycle of incremental improvements across a wide range of business activities. Entrepreneurial value creation is described in four comprehensive stages: value creation, value measurement, value enhancement, and value realization, referred to as the C-MER model. This book focuses on what creates value rather than merely presenting value creation in a straight accounting framework. At the same time, deliberate and tactical planning and implementation ensure that the firm does not ignore the components necessary for it to survive and flourish. Vigorous strategic deliberations maximize the entrepreneurial firm's chances of making the right business decisions for the future, enable the firm to manage its available financial and non-financial resources in the most optimal manner, ensure that the necessary capital is secured to progress the development of the firm to its desired development level, and build value. While financial considerations are important, the field of strategic entrepreneurial finance represents a fusion of three disciplines: strategic management, financial management, and entrepreneurship. This orientation represents a natural evolution of scholarship to combine specific domains and paradigms of naturally connected business disciplines and reflects the need to simultaneously examine business topics from different perspectives which may better encapsulate actual entrepreneurial practices.

Successful financial management begins with a solid understanding of the organization's strategic goals and objectives as well as its day-to-day business practices. Based in sound financial theory and journal literature augmented by common business policies, STRATEGIC FINANCIAL MANAGEMENT: APPLICATIONS OF CORPORATE FINANCE gives you the essential tools, techniques, and concepts you need in order to understand financial management from a strategic and operational perspective. The Department has addressed the £38 billion funding gap that emerged prior to 2010 between the funding it expected and the forecast cost of Defence over the following ten years. It has also cut its costs to live within a reduced budget. However, this has been achieved not just by delivering financial savings, but also by deferring some costs into future years, at the risk that these costs could increase because of the delay. The stability of the Department's financial position depends on the accuracy of a large number of assumptions it has to make, many of which have proved over-optimistic in the past, and its ability to: control its costs, achieve the significant savings anticipated in the equipment and infrastructure budgets, and manage the cost of the Department's

portfolio of nuclear-related programmes.

Many strategies are explained as actions that will achieve the desired goals or visions of the company, but in order to predict the success of your strategy it is vital to gain an understanding of how it will impact on the financial statement. Executive Finance and Strategy works on the premise that financial models can clearly demonstrate where a particular strategy might lead, enabling you to evaluate past accounts and statements in order to respond to recent company history. It also explains how company law and ethics underpin financial statements and clarifies your responsibilities as a

senior manager or director. By using finance as a record keeper and predictor of success, it helps you quantify your strategy to gain support from colleagues and take the right actions to ensure sustainable growth.

The Ministry of Defence does not place sufficient emphasis on financial management in its decision making and the finance function at the MOD does not have as central role in strategic planning as it should have. Annual financial plans at the MOD have been over-committed. By the end of July 2009, the budget for the Department was exceeded by its forecast for the rest of that year by £700 million. When the assumptions underlying the plan for 2010-11 were reassessed, the forecast deficit grew from £185 million to over £500 million. The Department should make choices in setting its budgets and priorities and could use financial management more effectively to address those factors which are within its control. The shortfalls in financial management have significant consequences. The over-commitment in future spending plans has led to additional savings being necessary. During 2009-10, the Department had to find additional savings of £800 million to bring its planned expenditure back into line with its budgets. Finding these reductions mid-year is a time-consuming and destabilising exercise. Many areas have to revisit or adjust their plans leading to delays, material changes to project specifications and costly renegotiation of contracts with industry. Delaying projects also leads to significant increases in the project cost. The forthcoming Strategic Defence and Security Review will provide an opportunity for the Department to rebalance its future spending plans in the short term. Over the longer term, however, the challenge for the MOD will be to ensure that these plans remain in balance.

Distinctive features

- Model question papers have been appended at the end of the book.
- Better justification of topics by merging the contents wherever required.
- Theory supported with caselets inspired from global as well as Indian context.

Financial management refers to the efficient and effective management of money (funds) in such a manner as to accomplish the objectives of the organization. It is the specialized function directly associated with the top management. The significance of this function is not only seen in the 'Line' but also in the capacity of 'Staff' in overall administration of a company. It has been defined differently by different experts in the field. It includes how to raise the capital, how to allocate it i.e. capital budgeting. Not only about long term budgeting but also how to allocate the short term resources like current assets. It also deals with the dividend policies of the share holders. DEFINITION of 'Strategic Financial Management ' Managing an organization's financial resources so as to achieve its business objectives and maximize its value. Strategic financial management involves a defined sequence of steps that encompasses the full range of a company's finances, from setting out objectives and identifying resources, analyzing data and making financial decisions, to tracking the variance between actual and budgeted results and identifying the reasons for this variance. The term "strategic" means that this approach to financial management has a long-term horizon.
