

Study Guides For Pharmacotherapy Board Certification

Updates for 2019! We've updated and added some content in the following disease states: Acid/Base Disorders, Bipolar Disorder, Breast Cancer, CHF, Chronic Kidney Disease, Clostridium Difficile, Crohn's, DVT/PE, Depression, Diabetes, Gout, Migraines, Hyperlipidemia, Hypertension, PUD, Meningitis, Osteoporosis, Parkinson's, PAD, Rheumatoid Arthritis, Sepsis, Sexual Dysfunction, Shingles, STD's, Vaccines. If you talk to anyone who's taken the BCPS exam, you'll quickly understand that the BCPS exam will likely be the most challenging exam you'll ever take. You need all the resources you can get to make sure you are prepared! In addition to the exam being very difficult, you are likely a busy professional with very minimal free time. I've always had a hard time staying focused while studying from large review article type study guides and have squandered hours reading while retaining very little. This book is intended to be a crash course/cheat sheet overview of the most highly testable material. I wanted to remember the really important stuff, because I know it is impossible to know every minute detail. BCPS Bullets, the Condensed BCPS Study Guide will help prepare you for the exam as well as help you maximize your study time. We covered over 100+ disease states straight from the BCPS content outline provided by BPS, and included important pearls for each condition including assessments, risk factors, most commonly used drugs of choice, must know adverse effects, miscellaneous clinical pearls, notorious drug interactions, warnings and precautions, and of course, relevant labs. I wanted to cover each disease state in 1-2 pages to try to ensure you are reviewing the most relevant content. We did go over 2 pages on some disease states, but we did our best to keep the information concise and critical for you to know in your preparation to becoming a Board Certified Pharmacotherapy Specialist. The book is over 300+ pages, but it is in bullet point format and very easy to digest multiple disease states at a sitting. There is also some white around the margins to take additional notes or highlight essential information to remember. As many of you are aware from the content outline, the BCPS exam is not all clinical. In addition to the disease states on the BCPS content outline, we've also included sections on biostatistics as well as important regulatory issues. I can assure you that there is no doubt this book will help in your preparation to becoming a BCPS pharmacist! The Board Certified Pharmacotherapy Specialist (BCPS) is a designation from the Board of Pharmacy Specialties. The contents within this study guide are not affiliated or endorsed by the Board of Pharmacy Specialties. Kaplan & Sadock's Study Guide and Self-Examination Review in Psychiatry is a comprehensive review of the specialty and perfect for stand-alone review or as preparation for the PRITE in-service, ABPN Part I, and recertification examinations. The book contains more than 1,600 multiple-choice questions and answers, with explanatory discussions of correct and incorrect responses. Chapters parallel the essential corresponding chapters in Kaplan & Sadock's

Synopsis of Psychiatry, a staple of psychiatry education around the globe. Terms and definitions are consistent with DSM-IV-TR and ICD-10.

As off-label use of medicines in children is no longer acceptable today, paediatric drug development is currently in transition from an almost exclusive academic specialty towards an integrated part of the global process that drives the development of new pharmaceuticals. US and EU governments have made it mandatory for the pharmaceutical industry to investigate medicines in children, thus exposing a multitude of different institutions to paediatric research. Written by exponents of the academia as well as the pharmaceutical industry, regulators and patient advocacy groups, this book explains the background of the US and EU paediatric legislations, gives an analysis of their probable short-, mid- and long-term impact, addresses key operational challenges in paediatric research, and develops a tentative vision where paediatric drug development needs to go. Helping to understand the role of the different stakeholders, the spectrum of readers to profit from this book ranges from paediatricians, general medical personnel and pharmacologists to those involved in regulatory affairs and clinical trials, pharmaceutical company management, patient advocacy groups, ethical committees, politicians and interested lay persons.

This volume reports on discussions among multiple stakeholders about ways they might help transform health care in the United States. The U.S. healthcare system consists of a complex network of decentralized and loosely associated

organizations, services, relationships, and participants. Each of the healthcare system's component sectors--patients, healthcare professionals, healthcare delivery organizations, healthcare product developers, clinical investigators and evaluators, regulators, insurers, employers and employees, and individuals involved in information technology--conducts activities that support a common goal: to improve patient health and wellbeing. Implicit in this goal is the commitment of each stakeholder group to contribute to the evidence base for health care, that is, to assist with the development and application of information about the efficacy, safety, effectiveness, value, and appropriateness of the health care delivered.

Simply put, this BCGP review from Meded101 will help you pass your exam and become a Board Certified Geriatric Pharmacist. I've worked my entire career in geriatrics and wanted to share some of that clinical knowledge with you as well as provide you an incredibly valuable study guide. Studying for a pharmacist board certification exam can be overwhelming. It's likely been a few years since you've taken an exam and the last thing you want to do is fail! The next to last thing you want to do is to try to find 3-6 months to study for the exam. As a father with two small children, I realize how valuable time is. What was frustrating to me about preparing for the Board Certified Geriatric Pharmacist (BCGP) exam, formerly the Certified Geriatric Pharmacist (CGP) exam as well as the BCPS exam was that the study material was not to the point. I felt like I needed to read thousands of pages to be adequately prepared. Recognizing that challenge of time management as a busy professional, I wanted to create the ultimate review for the BCGP exam that won't take you months to get

through. I wanted to give you the most important bullet points you need to know to best prepare for the exam. I utilized the BCGP outline to create this study guide. It breaks down nearly 80 of the most important geriatric disease states. In this breakdown I include information about the signs and symptoms, complications, risk factors, and of course the main drugs of therapy for each disease. I also break down the most important clinical pearls from the drugs of choice for each disease state. Within the medications to know breakdown for each disease state, you will find clinical pearls, important adverse effects, drug-disease and drug-drug interaction information, and essential compelling indications. While this review specifically follows the content outline for the BCGP (CGP) exam, pharmacists seeking Board Certification in Pharmacotherapy (BCPS) or those seeking Board Certification in Ambulatory Care (BCACP) may also benefit from the clinical information within this study guide. The Board Certified Geriatric Pharmacist, Board Certified Pharmacotherapy Specialist, and Board Certified Ambulatory Care Pharmacist are designations from the Board of Pharmacy Specialties (BPS). The contents contained within this study guide are not affiliated or endorsed by BPS.

Many people naturally assume that the claims made for foods and nutritional supplements have the same degree of scientific grounding as those for medication, but that is not always the case. The IOM recommends that the FDA adopt a consistent scientific framework for biomarker evaluation in order to achieve a rigorous and transparent process.

Whether you are interpreting the medical literature to optimize patient care, improve health outcomes, or generate hypothesis for research, an understanding of biostatistics is essential for success. Despite exposure to biostatistics in undergraduate and professional education, pharmacists tend to be less confident in their knowledge of biostatistics and their ability to interpret the medical literature than in their clinical skills. This book was developed to bolster the pharmacist's knowledge and confidence for using biostatistical tools for interpreting the literature. With material drawn from ACCP's renowned Pharmacotherapy Self-Assessment Program (PSAP) and the live pharmacotherapy preparatory course Updates in Therapeutics, editor Robert DiCenzo, Pharm.D., FCCP, BCPS, has designed this review to support pharmacists' preparation for the Pharmacotherapy and Ambulatory Care Board of Pharmacy Specialties (BPS) examinations.
