technology to engage learners and improve language learning inside and outside the classroom. This practical guide shows teachers how to successfully incorporate technology into TBLT in the classroom and to develop technology-mediated materials. Whether the goal is to conduct a needs analysis, to develop classroom or homework materials, or to implement a new approach of student assessment, *A Practical Guide to Integrating Technology into Task-Based Language Teaching* will be a welcome resource for language teachers at all levels. Designed for use in the classroom as well as for independent study, the book includes reflective questions, activities, and further reading at the end of each chapter. Examples of units in Chinese, Spanish, ESL, and the hospitality industry are provided. Georgetown Digital Shorts—longer than an article, shorter than a book—deliver timely works of peer-reviewed scholarship for a fast-paced world. Praise for the previous edition: 'This is a text that should accompany every student teacher of English and find its way on to the shelf of all practising teachers. This book excited me. It is written in a style that makes you want to try out activities and take up challenges. This book will encourage the student teacher to embrace the subject of English along with its associated values and debates' - ESCalate `If I was training to teach English today, this is the book I would want - an extraordinarily professional handbook of good practice ' - Geoff Barton, Times Educational Supplement, Teacher

Magazine This essential companion for aspiring secondary English teachers has been extensively reworked to help students meet the very latest professional and academic standards, while also equipping them with the knowledge and skills they will need for the beginning of their teaching career. Focusing on the essentials needed to be a successful English teacher, the authors combine subject knowledge with ideas, examples and approaches for creating an effective, vibrant learning environment, and real examples of lesson plans and schemes of work. Each chapter clearly links practice to theoretical and critical perspectives on teaching, making this an ideal text for students working towards M-level credits or a Masters in Teaching and Learning. There are also brand new chapters which explore in greater depth specific areas of contention and challenging issues, including: - Diversities, including global perspectives on teaching English - The application and implications of using ICT - Multi-agency provision in personalising learning - Research methodologies - Transition from the training year and the first year as a teacher The latest requirements for Qualified Teacher Status are clearly signposted throughout, and activities at the end of each chapter help to reinforce knowledge and encourage reflection. Written by a team of highly respected authors, this new edition should be on every secondary English student's bookshelf.

This best-selling textbook provides an engaging and user-friendly introduction to the study of language. Assuming no prior knowledge in the subject, Yule presents information in short, bite-sized sections, introducing the major concepts in language study – from how children learn language to why men and women speak differently, through all the key elements of language. This fourth edition has been revised and updated with twenty new sections, covering new accounts of language origins, the key properties of language, text messaging, kinship terms and more than twenty new word etymologies. To increase student engagement with the text, Yule has also included more than fifty new tasks, including thirty involving data analysis, enabling students to apply what they have learned. The online study guide offers students further resources when working on the tasks, while encouraging lively and proactive learning. This is the most fundamental and easy-to-use introduction to the study of language.

Experts from a range of disciplines explore how humans and artificial agents can quickly learn completely new tasks through natural interactions with each other. Humans are not limited to a fixed set of innate or preprogrammed tasks. We learn quickly through language and other forms of natural interaction, and we improve our performance and teach others what we have learned. Understanding the mechanisms that underlie the acquisition of new tasks through natural interaction is an ongoing challenge. Advances in artificial intelligence, cognitive science, and robotics are leading us to future systems with human-like capabilities. A huge gap exists, however, between the highly specialized niche capabilities of current machine learning systems and the generality, flexibility, and in situ robustness of human instruction and learning. Drawing on expertise from multiple disciplines, this Strüngmann Forum Report explores how humans and artificial agents can quickly learn completely new tasks through natural interactions with each other. The contributors consider functional knowledge requirements, the ontology of interactive task learning, and the representation of task knowledge at multiple levels of abstraction. They explore natural forms of interactions among humans as well as the use of interaction to teach robots and software agents new tasks in complex, dynamic environments. They discuss research challenges and opportunities, including ethical considerations, and make proposals to further

The role of interaction and corrective feedback is central to research in second language learning and teaching, and this volume is the first of its kind to explain and apply design methodologies and materials in an approachable way. Using examples from interaction, feedback and task studies, it presents clear and practical advice on how to carry out research in these areas, providing step-by-step guides to design and methodological principles, suggestions for reading, short activities, memory aids and an A-Z glossary for easy reference. Its informative approach to study design, and in-depth discussions of implementing research methodology, make it accessible to novice and experienced researchers alike. Commonly used tools in these paradigms are explained, including stimulated recalls, surveys, eye-tracking, meta-analysis and research synthesis. Open research areas and gaps in the literature are also discussed, providing a point-of-departure for researchers making their first foray into interaction, feedback and task-based teaching research.

This textbook offers an accessible approach to the subject of mathematics which divides the topic into smaller units, guiding students through questions, exercises and problems designed to slowly increase student confidence and experience. The sequence of studies is individualised according to performance and can be regarded as full tutorial course. The study guide satisfies two objectives

challenges of providing ‘hands-on’ learning when programmes with practice-based focuses have to be offered via distance learning. It presents a framework to help deconstruct the many aspects of ‘learning to become’ a professional or practitioner. Then, it demarcates the skills, knowledge and attributes towards ensuring learners are prepared for the exigencies of the future of work. The book details the types of pedagogical approaches, including project/inquiry/problem-based learning, which help assist learners to learn both the competencies and capabilities required. It introduces technology-enhanced learning (TEL) platforms and tools supporting ‘education 4.0’, and presents a series of contemporary research studies on the integration of TEL, which are augmented and updated to allow for the challenges of provisioning opportunities for ‘learning by doing’ through distance learning. Finally, the book proposes recommendations to help ensure that institutions are better prepared for the sustainable shift to distance learning.
