Instructional-Design Theories and Models, Volume IV provides a research-based description of the current state of instructional theory for the learner-centered paradigm of education, as well as a clear indication of how different theories and models interrelate. Significant changes have occurred in learning and instructional theory since the publication of Volume III, including advances in brain-based learning, learning sciences, information technologies, internet-based communication, a concern for customizing the student experience to maximize effectiveness, and scaling instructional environments to maximize efficiency. In order to complement the themes of Volume I (commonality and complementarity among theories of instruction), Volume II (diversity of theories) and Volume III (building a common knowledge base), the theme of Volume IV is shifting the paradigm of instruction from teacher-centered to learner-centered and integrating design theories of instruction, assessment, and curriculum. Chapters in Volume IV are collected into three primary sections: a comprehensive view of the learner-centered paradigm of education and training, elaborations on parts of that view for a variety of K-12 and higher education settings, and theories that address ways to move toward the learner-centered paradigm within the teacher-centered paradigm. Instructional-Design Theories and Models, Volume IV is an essential book for anyone interested in exploring more powerful ways of fostering human learning and development and thinking creatively about ways to best meet the needs of learners in all kinds of learning contexts.

This book answers a number of fundamental questions about listening in coaching and mentoring. What difference does being heard make to the speaker? How does it have that effect? What are the necessary components of good listening? How do you evaluate your practice as a listener and how do you improve? The process of writing this book led the author to look closely at his own practice, test, experiment, and push his listening to a higher level. He invites the reader to do the same. This book identifies what it takes to listen

well – the skills, mind-set, presence, self-awareness and self-management – and why it can be hard. It demonstrates how four modes of listening – attention, inquiry, observation and use of self – all contribute to the listener’s understanding and to the speaker’s awareness. It argues that we all have a ‘learning edge’ as listeners and provides a framework that helps each of us find it. The book is intended as a companion for anyone who commits to becoming a good listener. It shows how to develop expertise in the four modes of listening. It offers examples and principles to guide practice, questions for reflection, and a series of ‘workouts’ to help the listener develop their ability to listen. It encourages by showing how good listening is simple – you turn up, pay attention, and listen with all you have, and it challenges by identifying the work it takes to do that.
