Printing Industry generates a wide range of products which require in every step of our everyday life. Starting from newspapers, magazines, books, post cards to memo pads and business order forms each are the products of printing industry. Printing is a process for reproducing text and image, typically with ink on paper using a printing press. There are various types of printing process for example offset printing, modern printing, gravure printing, flexographic printing etc. Offset printing is a widely used printing technique where the inked image is transferred from a plate to a rubber blanket, then to the printing surface. When used in combination with the lithographic process, the offset technique employs a flat image carrier on which the image to be printed obtains ink from ink rollers, while the non printing area attracts a film of water, keeping the non printing areas ink free. Gravure printing is a printing technique, where the image to be printed is made up of small depressions in the surface of the printing plate. It is divided into three broad product areas; packaging printing, publication printing and speciality printing. Printing technology is often carried out as a large scale industrial process, and is an essential part of publishing and transaction printing. This is the age of hi fi, jets and computers. As editor Kenneth E. Hendrickson, III, notes in his introduction: "Since the end of the nineteenth-century, industrialization has become a global phenomenon. After the relative completion of the advanced industrial economies of the West after 1945, patterns of rapid economic change invaded societies beyond western Europe, North America, the

Commonwealth, and Japan." In The Encyclopedia of the Industrial Revolution in World History contributors survey the Industrial Revolution as a world historical phenomenon rather than through the traditional lens of a development largely restricted to Western society. The Encyclopedia of the Industrial Revolution in World History is a three-volume work of over 1,000 entries on the rise and spread of the Industrial Revolution across the world. Entries comprise accessible but scholarly explorations of topics from the "aerospace industry" to "zaibatsu." Contributor articles not only address topics of technology and technical innovation but emphasize the individual human and social experience of industrialization. Entries include generous selections of biographical figures and human communities, with articles on entrepreneurs, working men and women, families, and organizations. They also cover legal developments, disasters, and the environmental impact of the Industrial Revolution. Each entry also includes cross-references and a brief list of suggested readings to alert readers to more detailed information. The Encyclopedia of the Industrial Revolution in World History includes over 300 illustrations, as well as artfully selected, extended quotations from key primary sources, from Thomas Malthus' "Essay on the Principal of Population" to Arthur Young's look at Birmingham, England in 1791. This work is the perfect reference work for anyone conducting research in the areas of technology, business, economics, and history on a world historical scale.
