Three Page Research Paper

Linguistic complexity is one of the currently most hotly debated notions in linguistics. The essays in this volume reflect the intricacies of thinking about the complexity of languages and language varieties (here: of English) in three major contact-related fields of (and schools in) linguistics: creolistics, indigenization and nativization studies (i.e. in the realm of English linguistics, the "World Englishes" community), and Second Language Acquisition (SLA) research: How can we adequately assess linguistic complexity? Should we be interested in absolute complexity or rather relative complexity? What is the extent to which language contact and/or (adult) language learning might lead to morphosyntactic simplification? The authors in this volume are all leading linguists in different areas of specialization, and they were asked to elaborate on those facets of linguistic complexity which are most relevant in their area of specialization, and/or which strike them as being most intriguing. The result is a collection of papers that is unique in bringing together leading representatives of three often disjunct fields of linguistic scholarship in which linguistic complexity is seen as a dynamic and inherently variable parameter.

This book stimulates informed dialogue between librarians and historians regarding the changing nature of history and the resultant needs for a wider variety of collections and library services, including inter-library loan, library instruction, outreach, and reference.

For the most part, those who teach writing and administer writing programs do not conduct research on writing. Perhaps more significantly, they do not often read the research done by others because effective reading of articles on empirical research requires special knowledge and abilities. By and large, those responsible for maintaining and improving writing instruction cannot -- without further training -- access work that could help them carry out their responsibilities more effectively. This book is designed as a text in graduate programs that offer instruction in rhetoric and composition. Its primary educational purposes are: * to provide models and critical methods designed to improve the reading of scientific discourse * to provide models of effective research designs and projects appropriate to those learning to do empirical research in rhetoric. Aiming to cultivate new attitudes toward empirical research, this volume encourages an appreciation of the rhetorical tradition that informs the production and critical reading of empirical studies. The book should also reinforce a slowly growing realization in English studies that empirical methods are not inherently alien to the humanities, rather that methods extend the power of humanist researchers trying to solve the problems of their discipline.

The authors are proud sponsors of the 2020 SAGE Keith Roberts Teaching Innovations Award—enabling graduate students and early career faculty to attend the annual ASA pre-conference teaching and learning workshop. This concise text carries the public sociology movement into the introductory sociology classroom. While teaching students to think sociologically and to develop a sociological eye, it also demonstrates how sociology can be used as a tool for improving society. As they explains the discipline?s basic theories and concepts, the authors provide many examples of "engaged" sociologists who are working to solve some of society?s most intractable problems. Through a number of exercises and projects in every chapter, students are encouraged to become engaged in their own communities. The authors put their own commitment to public sociology into action by donating 10% of their royalties to a non-profit organization that works to alleviate social injustice.

'A clear, concise, and elegant conversation with the reader about the goals and methods of effective education. Veteran as well as novice teachers will benefit from the examples and suggestions presented in this book." Howard Gardner, Harvard Graduate School of Education "The book is brief ... but it packs in lots of advice.... [Filene] addresses nuts-and-bolts questions that more highfalutin books on pedagogy might overlook." Chronicle of Higher Education "Similar to a few self-help books, this book is worth reading every few years to remind us that there are better or different ways to do things." Education Review Gathering concepts and techniques borrowed from outstanding college professors, The Joy of Teaching provides helpful guidance for new instructors developing and teaching their first college courses. Award-winning professor Peter Filene proposes that teaching should not be like a baseball game in which the instructor pitches ideas to students to see whether they hit or strike out. Ideally, he says, teaching should resemble a game of Frisbee in which the teacher invites students to catch ideas and pass them on. Rather than prescribe any single model for success, Filene lays out the advantages and

disadvantages of various pedagogical strategies, inviting new teachers to make choices based on their own personalities, values, and goals. Filene tackles everything from syllabus writing and lecture planning to class discussions, grading, and teacher-student interactions outside the classroom. The book's down-to-earth, accessible style makes it appropriate for teachers in all fields. Instructors in the humanities, the social sciences, and the natural sciences will all welcome its invaluable tips for successful teaching and learning.

One of the most perplexing aspects of research today is what to do when there's too much information on a topic. The key, says Leslie Stebbins, is to know how to find the most promising information, evaluate it, and use it effectively. Individual chapters provide a step-by-step introduction to research and critical evaluation and specific types of information resources, as well as guidance on such skills as note-taking and referencing. Students and librarians alike will benefit from these suggestions, strategies and straightforward examples for developing good filtering instincts and management of search results.

Most writing is done under pressure. An executive has to produce a three-page position paper by tomorrow at nine. A department head suddenly has to write a one-page action memo by noon. A graduate student has a twenty-page research paper due in a week. Yet, while most students and professionals write under pressure--with limited time, limited space, and a supervisor or instructor to please--few approach the task systematically. In Writing Under Pressure, Sanford Kaye, a renowned expert on the subject, presents a system he calls the Quick Writing Process (QWP) that focuses on real-world writing tasks and demonstrates how to produce the clearest, most honest, most powerful work possible under the constraints of time and space. A writing instructor with twenty-five years' experience teaching students and professionals in business and government, Kaye tells writers how to budget their time and how to use this time efficiently. Exploring particular writing situations in which QWP can be applied to make the most of what the writer knows, Kaye discusses the process of taking exams, focusing on how instructors select questions and evaluate essays. He also considers writing in business and government, featuring an insightful analysis of a memo written by Colonel Oliver North. This memo highlights one of the most important issues writers in business and government face: whether to write the truth as they see it or simply what their bosses want to hear. Presenting a wealth of such examples, Kaye reveals how to break through stifling organizational codes in order to write memos and position papers that count. While most guides to writing ignore the constraints of time and space, Writing Under Pressure tackles these problems head on, making it an essential reference for students, business professionals, government officials, or anyone else faced with a difficult writing assignment that has to be done now.

How to Get Started in Arts and Humanities Research with Undergraduates is designed for faculty members and administrators who wish to develop opportunities for undergraduate research, scholarship, and creative work in the arts and humanities. Since the scholarly norms, definitions of research, and roles of collaboration and individual study in the arts and humanities can differ from those in the sciences, the book contributes new ideas for meaningful student participation in the scholarship of these disciplines and for connections to faculty work. Written by faculty with substantial expertise in working with undergraduate researchers, the book's 11 chapters offer models of successful practice in a wide range of disciplines and cross-disciplinary programs, and demonstrate the integral role of undergraduate research in these disciplines.
