The only modern guide to all aspects of practical tunnel construction Practical Tunnel Construction fills a void in the literature for a practical guide to tunnel construction. By taking the reader through a brief introduction and history to a comprehensive discussion of how the geological factors affect tunneling, the author covers the stages and technology that are common today without using complex equations. Written for the individual who does not have an extensive background in tunneling but who has to make tunneling decisions, the various tunneling methods are discussed to help in the determination of the appropriate method. The methods discussed are: hand mining, drill/blast, Tunnel Boring Machine (TBM), New Austrian Tunnelling Method (NATM), Norwegian Method of Tunnelling (NMT), Roadheader, Earth Pressure Balance Machine (EPBM), and Slurry Pressure Balance Machine (SPBM). This book focuses on driven tunnels. This versatile handbook: Offers clear and accessible coverage of the state of the art in tunnel construction Introduces the essentials of design and construction of many types of tunnels, including TBM, EPB, Roadheader, NATM, drill and blast, and soft ground tunneling Provides nontechnical guidance on selecting the most appropriate tunneling methods for various situations Includes a brief history of tunneling and an introduction to geotechnical considerations Discusses tunnel access shaft construction, mucking methods,

Rock Mass Classifications - A Practical Approach in Civil Engineering was written in response to the many unanswered questions regarding this subject. Questions such as - Is Classification reasonably reliable? Can it be successful in crisis management of geohazards? Can a single Classification system be general for all rock structures? Is Classification a scientific approach? Laborious field research was undertaken in the Himalayan mountains by a team of scientists from the Central Mining Research Institute (CMRI), University of Roorkee (UOR), Central Soil and Material Research Station (CSMRS), U.P. Irrigation Research Institute (UPIRI), and Norwegian Geotechnical Institute (NGI) to answer these questions. The results obtained from the research work were systematically compiled to produce this book which bears particular relevance to civil, mining and petroleum engineers and geologists. Marc de Hond vertelt openhartig over de periode nadat hij te horen had gekregen dat hij kanker had. Vol optimisme en humor weet hij zelfs licht te brengen in de donkerste momenten. 'We wachten niet tot het licht aan het einde aan de tunnel, maar we hangen zelf de lampjes op.' Toen Marc de Hond eind 2018 hoorde dat hij ziek was, beseftte hij dat er een grote kans was dat hij zijn kinderen niet groot zou zien worden. Hij besloot een dagboek te gaan bijhouden. Het werd een periode van veel slecht nieuws en donkere momenten. Maar hij en zijn gezin traden ook de moeilijke momenten met optimisme en humor tegemoet. De lampjes in de tunnel waren het bijzondere huwelijksaanzoek in Carré tijdens de eerste chemo, het afscheidsfeest voor zijn blaas die verwijderd moest worden, de pretparkbezoeken met de kinderen op goede dagen en het huwelijksfeest toen Marc en zijn vrouw Remona al wisten dat hij niet meer beter zou worden, maar dat geheim hielden voor hun gasten. Licht in de tunnel is een bijzonder boek met een unieke en inspirerende kijk op leven en dood. Naar Marcs wens verschijnt het na zijn dood. Hij overleed op 3 juni 2020.

More than ten years have passed since the first edition was published. During that period there have been a substantial number of changes in geotechnical engineering, especially in the applications of foundation engineering. As the

world population increases, more land is needed and many soil deposits previously deemed unsuitable for residential housing or other construction projects are now being used. Such areas include problematic soil regions, mining subsidence areas, and sanitary landfills. To overcome the problems associated with these natural or man-made soil deposits, new and improved methods of analysis, design, and implementation are needed in foundation construction. As society develops and living standards rise, tall buildings, transportation facilities, and industrial complexes are increasingly being built. Because of the heavy design loads and the complicated environments, the traditional design concepts, construction materials, methods, and equipment also need improvement. Further, recent energy and material shortages have caused additional burdens on the engineering profession and brought about the need to seek alternative or cost-saving methods for foundation design and construction.

First Published in 1999: The Bridge Engineering Handbook is a unique, comprehensive, and state-of-the-art reference work and resource book covering the major areas of bridge engineering with the theme "bridge to the 21st century."
