Pioneers in Marketing: A Collection of Biographical Essays discusses eight historically important marketing scholars whose careers collectively spanned over 100 years. An introductory chapter describes the role of biography in the study of marketing thought, and introduces the eight subjects in this collection. Subsequent chapters describe the lives of Edward David Jones, Simon Litman, Henry Charles Taylor, Percival White, George Burton Hotchkiss, Theodore N. Beckman, David D. Monieson, and William R. Davidson, focusing on their intellectual and professional contributions to the marketing discipline. The biographies are based on rare archival materials, some personal interviews, and analysis of the subjects' major works. The final chapter draws lessons from the collection for marketing students and teachers. Several important discoveries are reported that suggest opportunities for further research. These stories will inform and inspire students of marketing.

Diego Rivera, Dorothea Lange, Adolfo Pérez Esquivel: Art and activism have long been intertwined, and the political fallout has resulted in an artistic canon riddled with historical holes. One of the most glaring omissions from most listings of American art masters is Ad Reinhardt (1913–67). An artist who had significant ties to the American Communist movement and leftist political organizations, Reinhardt and his contributions to modern art have been largely pushed out of the spotlight for political reasons. But in this unprecedented in-depth study of Reinhardt's life and work, Michael Corris returns the artist to his rightful place in the history of modern art and culture. A pioneering avant-garde artist with fierce political beliefs, Reinhardt immersed himself in the vibrant left-wing political and cultural circles of the 1930s and '40s, only to be marginalized by the social and cultural conservatism that arose in postwar America. Corris examines Reinhardt's work against this historical background, charting the development of his entire oeuvre, ranging from his abstract paintings to his popular graphic artwork, illustrations and cartoons. Ad Reinhardt also re-evaluates Reinhardt's role and influence in the art world,

chronicling his time as an artist and educator at the California School of Fine Arts, University of Wyoming, Yale University, and Hunter College, and examining his influence on younger artists who created successive avant-garde movements such as minimal and conceptual art. A long-awaited examination of a less-heralded American master, Ad Reinhardt is a fascinating portrait of an artist whose political radicalism infused his art with a poignant resonance that stretches, through this rediscovery, into the present.

' This book is a unique work which provides an in-depth exploration into the mathematical expertise, philosophy, and knowledge of H W Gould. It is written in a style that is accessible to the reader with basic mathematical knowledge, and yet contains material that will be of interest to the specialist in enumerative combinatorics. This book begins with exposition on the combinatorial and algebraic techniques that Professor Gould uses for proving binomial identities. These techniques are then applied to develop formulas which relate Stirling numbers of the second kind to Stirling numbers of the first kind. Professor Gould's techniques also provide connections between both types of Stirling numbers and Bernoulli numbers. Professor Gould believes his research success comes from his intuition on how to discover combinatorial identities. This book will appeal to a wide audience and may be used either as lecture notes

for a beginning graduate level combinatorics class, or as a research supplement for the specialist in enumerative combinatorics. Contents: Basic Properties of Series The Binomial Theorem Iterative Series Two of Professor Gould's Favorite Algebraic Techniques Vandermonde Convolution The  $n$ th Difference Operator and Euler's Finite Difference Theorem Melzak's Formula Generalized Derivative Formulas Stirling Numbers of the Second Kind  $S(n; k)$  Eulerian Numbers Worpitzky Numbers Stirling Numbers of the First Kind  $s(n; k)$  Explicit Formulas for  $s(n; n - k)$  Number Theoretic Definitions of Stirling Numbers Bernoulli Numbers Appendix A: Newton-Gregory Expansions Appendix B: Generalized Bernoulli and Euler Polynomials Readership: Undergraduates, graduates and researchers interested in combinatorial and algebraic techniques. Key Features: Professor Gould is an acknowledged expert in the field of Stirling number identities For the first time in print, this book collects Professor's Gould's vast knowledge on this subject in one accessible location This book contains Professor Gould's unique approaches to discovering and proving binomial identities This book contains many fully-worked detailed proofs of the identities found in H W Gould's "Combinatorial Identities: A Standardized Set of Tables Listing 500 Binomial Coefficient Summations" Keywords: Stirling Numbers of the First Kind; Stirling Numbers of the Second Kind; Bernoulli Numbers; Generalized Bernoulli Polynomials; Worpitzky Numbers; Eulerian Numbers; Binomial Theorem; Vandermonde Convolution; Euler's Finite Difference Theorem; Melzak's Formula "This book is a

"These photographs are taken from my sketchbooks of visual notes in which are collected my daily 'exercises.' From these images I have chosen those that convey the freshness present in things in their new born state, and that could represent directions for further investigations to take which remain full of potential." Presented here in color are 230 of Franco Fontana's previously unpublished photographic studies, which are to his photography what preparatory sketches are to a painter. Excerpt from George Edmund Street: Unpublished Notes and Reprinted Papers With an Essay I have written the memorial, brief enough and all inadequate, of a man who died more than thirty years ago, who lived a Tory and a High Churchman, who worked to revive Gothic architecture in England. His books are out of print, his occasional papers and pamphlets so entirely dispersed and forgotten that not even a bibliography can be recovered. His name goes unrecognized in general talk; his party is wasted to a wraith or transformed beyond recognition; his Church is menaced by Disestablishment in Wales, and Modernism on the Continent; his strong and sincere architecture is superseded by steel and concrete; yet no man ever less fought a losing fight, no figure ever less evoked regret or toleration. He prospered, but his personality made that a kind of happy consequence; he served God, but his genius made that a kind of crowning grace; he was an Englishman, but

was that in no mean or halfway fashion. Rather, George Street embodied and expressed in his own temper the very genius of the northern kind.
